By using the Shenzhen Dongguan Huizhou sub region SDH in southern China as an empirical case, this book provides convincing evidence that China's city regionalism is essentially a state orchestrated and institution based process. Perspectives from market, industry, infrastructure and multi level governance (MLG) have been provided to systematically examine China's city regionalism. This book has essentially made a definitive contribution to China's regional governance. Methodologically, it shows how China's city regionalism can be examined through a problem solving and case by case paradigm through building a bridge between an empirical slogan and an inclusive theoretical term for institutional integration and through MLG and its integrative approaches in China. Exhilarating findings are presented using extensive tables, graphs and maps along with the integration of quantitative and qualitative methods. Undergraduates, graduates and researchers who are interested in China's city regionalism and regional governance would be the readership of the book and officers from different levels of government as well as policymakers will find the book inspiring.
