Regulation Without The State The Debate Continues:

Regulation Without the State John Blundell, Colin Robinson, 1999 The rising tide of government regulation in most countries is provoking a reconsideration of the extent to which the state should lay down rules for others Self regulation and other forms of voluntary rule setting are being examined as substitutes for regulation by government Readings 52 begins with a paper by John Blundell and Colin Robinson which analyses the forces behind government regulation its shortcomings and the scope for voluntary regulation Seven papers by distinguished commentators on regulation then examine Blundell and Robinson s conclusions *Leading Issues in Competition, Regulation, and Development* Paul Cook, 2004-01-01

The promotion of liberalized and deregulated markets by bilateral and multilateral aid donors and by global institutions such as the WTO has led to significant attention being paid to competition and regulatory reforms in developing economies The process of reform involves the transfer and diffusion of market models derived from practice and theory in developed countries However in developing countries regulation needs to do more than simply promote competitiveness and consumer interests it also needs to ensure that the market nurtures development By rigorously examining the numerous impacts of regulation this book will help to fill a significant gap in the literature on economic and social development The book now available in paperback draws together contributions from leading experts across a range of disciplines including economics law politics and governance public management and business management The authors begin with an extensive overview of the issues of regulation and competition in developing countries and carefully illustrate the important themes and concepts involved Using a variety of country and sector case studies they move on to focus on the problems of applicability and adaptation that are experienced in the process of transferring best practice policy models from developed to developing countries The book presents a clear agenda for further empirical research and is notable for its rigorous exploration of the links between theory and practice Although there is substantial interest in competition and regulation as yet there has been relatively little investigation of these issues in developing economies This book redresses the balance and will be a valuable resource for researchers academics teachers and students interested in development economics and development studies It will also be of great relevance for practitioners and policymakers working in the fields of competition policy and regulatory reform
