

# Demystifying brain injury

## WHAT IS IT?

Traumatic brain injury (known as TBI) results from a violent blow, jolt to the head, or an object that penetrates brain tissue. Brain injury is unpredictable in its consequences and impacts everyone differently.

## WHAT HAPPENS IN A BRAIN INJURY?

A hit or jolt to the head causes the brain to move inside the skull or damages the skull. This in turn causes the destruction of brain cells and impairs the function for which that part of the brain is responsible.

An injury to the **FRONT** of the brain might impact problem solving or planning skills.

An injury to the **BACK** of the brain might impact sight, language, or body awareness.

## TREATMENT

After diagnosis, treatment for brain injury may include some combination of surgery, medication, and rehabilitation therapies, like speech therapy, cognitive therapy, physical therapy or occupational therapy.

The goal of brain rehabilitation therapy is to recover lost skills of daily living and maximize independence.

## REAL PEOPLE. REAL INJURIES.

### BRAIN INJURY IS...

“

...An invisible injury - everyone thinks you look fine on the outside, but on the inside things aren't working like they used to.

”

“

...Like working on a 1000-piece puzzle but some of the pieces are missing and you don't know which ones.

Traumatic Brain Injury Mark J. Ashley, David A. Hovda, 2017-07-28 The fourth edition of this text constitutes a continuation of 20 years of coverage of traumatic brain injury and broadens the discussion of acquired brain injury Within TBI the paradigm shift from an injury occurring at a point in time to a disease entity of a chronic nature is changing the discussion of diagnosis management treatment and outcome assessment Disease specification that differentiates TBIs by the mechanism of injury the exact nature of the injury the extent of injury presence of co morbidities and their exact nature gender age race and genome are emerging as crucial Disease differentiation has impacted diagnosis treatment and outcome

*Traumatic Brain Injury Rehabilitation* Rudi Coetzer, 2006 Clinical neuropsychology and neuro rehabilitation are disciplines that have truly developed at a phenomenal pace over the last couple of decades Practitioners have had to make a continued commitment to staying up to date There are many exciting theoretical clinical and technological developments within the field However central to all of these remains the issue of working with persons who have experienced an extreme life changing experience Often persons struggle to make sense of a traumatic brain injury and live life as it is for them now Because of improved acute medical care there are more survivors of traumatic brain injury today than ever before Traumatic brain injury and the resulting disability constitute a major loss for the individual Assisting persons with coming to terms with the changes after traumatic brain injury is probably one of the essential tasks in many rehabilitation programs taking a longer term view regarding outcome This book represents how neuro rehabilitation has evolved over the past decade and includes exciting new studies in this field

*Physical Management in Neurological Rehabilitation* Maria Stokes, 2004 Building upon the success of the first edition of this popular book the new edition of Physical Management in Neurological Rehabilitation has been completely up dated and revised to reflect changes in practice today The authors consider the theoretical basis and scientific evidence of effective treatment taking a multidisciplinary problem solving approach to patient management which involves patients and carers in goal setting and decision making Book jacket
