1992-1997 ,1991 Ethology and Behavioral Ecology of Sea Otters and Polar Bears Randall W. Davis,Anthony M. Pagano,2021-07-03 Sea otters and polar bears are carnivorous marine mammals that still resemble their terrestrial ancestors Compared with Cetacea whales and dolphins Sirenia dugongs and manatees and Pinnipedia seals sea lions and walrus they are less adapted for an aquatic life and the most recently evolved among marine mammals Sea otters are amphibious but seldom come ashore and polar bears primarily occur on sea ice or along the shore When at sea both species spend most of their time swimming at the surface or making short shallow dives when foraging or pursuing prey Indeed polar bears rarely pursue seals in water Nevertheless polar bears are powerful swimmers and will stalk seals from the water As with many other large carnivores they are solitary hunters Although sea otters are gregarious and form aggregations at sea called rafts they are primarily asocial Except during mating the principal interaction among sea otters occurs between a female and offspring during the six month dependency period In large carnivores e g wolves and lions that feed on ungulates sociality and cooperation are favored because of the need to capture large prey and defend carcasses Polar bears which are the largest terrestrial carnivore are solitary hunters of seals and are neither gregarious nor social Males and females briefly associate during courtship and mating During this time males aggressively compete for females At other times males generally avoid each other except for aggregations of males that form while summering on land and females with cubs avoid males which are known for infanticide As with sea otters the interaction of polar bears outside of mating occurs between a female and her offspring during the 2 3 year dependency period This interaction is critically important when altricial cubs are born in the winter den This book provides new insight into the ethology and behavioral ecology of sea otters and polar bears Each chapter reviews the discoveries of previous studies and integrates recent research using new techniques and technology The authors also address historic and current anthropogenic challenges for their survival as climate change alters entire marine ecosystems

Status of Alaska Natives United States. Congress. Senate. Select Committee on Indian Affairs,1989 *Pathologic Findings in Stranded Marine Mammals: A Global Perspective* Gregory Dana Bossart,Alvin Cyril Camus,Debra Lee Miller,Stephen Raverty,2022-02-09 This project is posthumously dedicated to Dr Gregory Dana Bossart Whether you knew him as colleague mentor friend family member or simply knew of him you could not help but be awestruck by his dedication intelligence thoughtfulness work ethic and passion for scientific inquiry especially for conservation of the marine environment Many of his publications were seminal in marine mammal health including infectious environmental and zoonotic diseases As we collected manuscripts for this special Frontiers edition it was heartwarming to hear the comments from contributors So many research scientists field biologists and veterinarians could easily have given up and said I just can't do this now especially with the added challenges posed by the current COVID 19 pandemic Instead contributors from around the world were determined to contribute to this collection because of their inspiration and shared commitment with Greg's vision The love and admiration within the marine community for Greg is phenomenal With that said we would be

remiss if we did not say a few words about Greg as a mentor and friend Greg had a knack for helping students realize their abilities and pursue their own independent contributions to the marine mammal community He shared in their successes and worked tirelessly to facilitate their aspirations Greg would involve students early career scientists and colleagues in projects introduce them to collaborators and promote them and their work Greg was a genuinely caring person When he asked you how are you doing he honestly wanted to know He was always there ready to listen and provide guidance If you were to ask Greg what was most important to him in life he would say God family and marine life and one could argue that he had a special fondness for manatees He believed in the beauty of nature and that God had a hand in all of it He was in pursuit of ensuring that we all share this earth responsibly and sustainably We miss Greg dearly but honor and celebrate him as we carry on in our pursuits **House documents** ,1876
