Sting and Religion Evyatar Marienberg,2021-01-06 On the back cover of one of his most groundbreaking solo albums Nothing like the Sun of 1987 Sting Gordon Matthew Sumner b 1951 in Wallsend UK somberly stands close to a statue of Mary the mother of Jesus The album was released a few months after his own mother Audrey died The picture was taken on the island of Montserrat where he was recording the album apparently on the day of her death I said goodbye to my mother as I had a recording date in Montserrat and she died a week later When asked by the author if his mother was particularly

connected to Mary and if this was why he chose this image he replied No but I did This evocative photograph and Sting's quick answer encapsulate the two pillars of this book a microhistory of a specific British Catholic parish in the 1950s 60s and the impact that growing up there had on Sting's artistic output And beyond that this book opens a window onto the influence of Catholic education and imagination on millions of less famous people who had similar upbringings

The Sea Floor Eugen Seibold, Wolfgang H. Berger, 2013-06-29 Man's understanding of how this planet is put together and how it evolved has changed radically during the last 30 years This great revolution in geology now usually subsumed under the concept of Plate Tectonics brought the realization that convection within the Earth is responsible for the origin of today's ocean basins and continents and that the grand features of the Earth's surface are the product of ongoing large scale horizontal motions Some of these notions were put forward earlier in this century by A Wegener in 1912 and by A Holmes in 1929 but most of the new ideas were an outgrowth of the study of the ocean floor after World War II In its impact on the earth sciences the plate tectonics revolution is comparable to the upheaval wrought by the ideas of Charles Darwin 1809 1882 which started the intense discussion on the evolution of the biosphere that has recently heated up again Darwin drew his inspiration from observations on island life made during the voyage of the Beagle 1831 1836 and his work gave strong impetus to the first global oceanographic expedition the voyage of HMS Challenger 1872 1876 Ever since oceanographic research has been

intimately associated with fundamental advances in the knowledge of Earth. This should come as no surprise. After all, our planet's surface is mostly ocean.

Sea Snails Joseph Heller, 2015-06-16

This richly illustrated book presents the diversity and natural history of sea snail groups. By integrating aspects of morphology, ecology, evolution, and behaviour, it describes how each group copes with problems of defence, locomotion, nutrition, reproduction, and embryonic development. First come general characteristics of the Mollusca to which snails belong, and next characteristics by which snails (Gastropoda) differ from other molluscs. Then a broad panoramic view of all major sea snail groups, from the primitive to the more advanced, is presented, including both the more abundant and some remote ones of special interest. In detailing primitive sea snails, first limpets (Patellogastropoda) are described, followed by brush snails (Vetigastropoda), top shells, turban shells, and allies, and Neritimorpha, a small group with remarkably high variation in shell colour and in habitats. In looking at advanced snails (Caenogastropoda), it details the herbivorous grazers and filter feeders and the many voracious predators, some of which use venomous darts. The book also covers sea slugs (Opisthobranchia), which have shifted from mechanical to chemical defence; some are herbivores, some use their food to harness solar energy, others are predators that gain stinging cells and poisonous compounds from their food. In addition, readers will learn about aspects of sea snails in human culture, including use as sacred artefacts and objects of magic and money, as a source of the royal and sacred dyes of purple and blue, and as holy ceremonial trumpets. The text, in which scientific terms are accompanied by parallel common ones, is accompanied by over 200 illustrations, mostly in colour. This comprehensive, insightful portrait of sea snails will appeal to marine biologists, zoology lecturers, and students, biology teachers, field school instructors, nature reserve wardens, amateur naturalists, as well as to lecturers and learners of human culture.
