Community Search over Big Graphs Xin Huang, Laks V.S. Lakshmanan, Jianliang Xu, 2022-05-31 Communities serve as basic structural building blocks for understanding the organization of many real world networks including social biological collaboration and communication networks Recently community search over graphs has attracted significantly increasing attention from small simple and static graphs to big evolving attributed and location based graphs In this book we first review the basic concepts of networks communities and various kinds of dense subgraph models We then survey the state of the art in community search techniques on various kinds of networks across different application areas Specifically we discuss cohesive community search attributed community search social circle discovery and geo social group search We highlight the challenges posed by different community search problems We present their motivations principles methodologies algorithms and applications and provide a comprehensive comparison of the existing techniques This book finally concludes by listing publicly available real world datasets and useful tools for facilitating further research and by offering further readings and future directions of research in this important and growing area

Urban Recycling and the Search for Sustainable Community Development Adam S. Weinberg, David N. Pellow, Allan Schnaiberg, 2000-07-24 More Americans recycle than vote And most do so to improve their communities and the environment But do recycling programs advance social economic and environmental goals To answer this three sociologists with expertise in urban and environmental planning have conducted the first major study of urban recycling They compare four types of programs in the Chicago metropolitan area a community based drop off center a municipal curbside program a recycling industrial park and a linkage program Their conclusion admirably elaborated is that recycling can realize sustainable community development but that current programs achieve few benefits for the communities in which they are located The authors discover that the history of recycling mirrors many other urban reforms What began in the 1960s as a sustainable community enterprise has become a commodity based profit driven industry Large private firms using public dollars have chased out smaller nonprofit and family owned efforts Perhaps most troubling is that this process was not born of economic necessity Rather as the authors show socially oriented programs are actually more viable than profit focused systems This finding raises unsettling questions about the prospects for any sort of sustainable local development in the globalizing economy Based on a decade of research this is the first book to fully explore the range of impacts that recycling generates in our communities It presents recycling as a tantalizing case study of the promises and pitfalls of community development It also serves as a rich account of how the state and private interests linked to the global economy alter the terrain of local neighborhoods
