Man The Planets:

One Man's Planet Stephen M. Testa, 2009 One Man's Planet is a slightly off centered geologist's introduction to how politics pop culture and the earth sciences mix it up every day in all of our lives A humorous look at a myriad of issues that grace the news and drive political debates from local councils to international discourse One Man's Planet picks apart the rhetoric on all sides of these debates to look at how the science describes the issue often to the nakedness of the opposing parties Tackling topics like climate energy water and hazards Stephen Testa channels Beanie Babies Mad Max and Shakespeare among others to examine the latest scientific understanding of these issues Author Stephen Testa weaves science personalities pop culture and politics into a very informative and entertaining tapestry on the planet today and the planet's tomorrow Come tour the Earth with Testa as your guide

Baker,2014-04-15 ANTHROPOGENY The Esoteric History of Man s Origin This book and its contents devolve from four great questions Who are we Where do we come from Why are we here Where do we go to from here In this brilliantly written masterpiece Dr Baker has tried as far as possible to avoid a repetition of facts and figures given by The Secret Doctrine except where these are important in elucidating confirming contradicting or supporting some point of new detail When H P Blavatsky wrote The Secret Doctrine the great biological periods which we know so well today were not yet clearly defined in terms of age and extent Also by her own admission many figures given by the Masters to her were inevitably altered in the process of being passed on to others for publication Instead of loosely referring to time in terms of Rounds and Chains Root Races and Sub races Dr Baker has endeavoured by correlation cross checking and by final resort to questioning the Master Blavatsky directly to give wherever possible time factors in terms of years eras and periods This has not been easy and may not always stand the closest of inspection but it must be remembered that in eighty per cent of our investigations here we are dealing with paralleling evolutions sometimes on three different planes at once The march of science will steadily bring confirmation of broad outlines correct minor errors and add supplementary detail No matter how abstruse how surrounded with mystery the subject of Man s origin we should remember the words of Paracelsus Things that are considered now to be impossible will be accomplished and that which is unexpected will in the future prove to be true and that which is looked upon as superstition in one century will be the basis of the approved science of the next Many drawings images tables and references are included to make this fascinating subject more comprehensible to the student who is ready to seek the answers to the four great questions posed above
