successfully used in actual industrial projects while others are from the forefront of research. Authors include practitioners, business thinkers, academics, and applied mathematicians. These seemingly different papers address different aspects of a single problem: taming complexity. Behavioral Specifications of Businesses and Systems emphasizes simplicity and elegance in specifications without concentrating on particular methodologies, languages, or tools. It shows how to handle complexity and specifically how to succeed in understanding and specifying businesses and systems based upon precise and abstract concepts. It promotes reuse of such concepts and of constructs based on them without taking reuse for granted. Behavioral Specifications of Businesses and Systems is the second volume of papers based on a series of workshops held alongside ACM's annual conference on Object Oriented Programming Systems Languages and Applications OOPSLA and European Conference on Object Oriented Programming ECOOP. The first volume, Object Oriented Behavioral Specifications, edited by Haim Kilov and William Harvey, was published by Kluwer Academic Publishers in 1996.

The Unified Modeling Language, 1999 **Evolution and Challenges in System Development**, Joze Zupancic, W. Gregory Wojtkowski, Wita Wojtkowski, Stanislaw Wrycza, 2012-12-06

This book is a result of the Seventh International Conference on Information Systems Development Methods and Tools Theory and Practice held in Bled, Slovenia, September 21-23, 1998. The purpose of the conference was to address issues facing academia and industry when specifying, developing, managing, and improving information computerized systems. During the past few years, many new concepts and approaches emerged in the Information Systems Development (ISD) field. The various theories, methods, and tools available to system developers also bring problems such as choosing the most effective approach for a specific task. This conference provides a meeting place for IS researchers and practitioners from Eastern and Western Europe as well as from other parts of the world. An objective of the conference is not only to share scientific knowledge and interests but to establish strong professional ties among the participants. The Seventh International Conference on Information Systems Development (ISD 98) continues the concepts of the first Polish Scandinavian Seminar on Current Trends in Information Systems Development Methodologies held in Gdansk, Poland, in 1988. Through the years, the Seminar developed into the International Conference on Information Systems Development (ISD 99) which will be held in Boise, Idaho. The selection of papers was carried out by the International Program Committee. All papers were reviewed in advance by three people. Papers were judged according to their originality, relevance, and presentation quality. All papers were judged only on their own merits, independent of other submissions.

Welcome to the proceedings of ECOOP 2009. Thanks to the local organizers for working hard on arranging the conference with the hard work they put in, it was a great success. Thanks to Sophia Drossopoulou for her dedicated work as PC Chair in assembling a new scientific program including

forward looking keynotes and for her efforts to reduce the environmental impact of the PC meeting by replacing a physical meeting with a virtual meeting I would also like to thank James Noble for taking the time and effort to write up last year's banquet speech so that it could be included in this year's proceedings One of the strong features of ECOOP is the two days of workshops preceding the main conference that allows intense interaction between participants Thanks to all workshop organizers Last year's successful summer school tutorials were followed up this year with seven interesting tutorials Thanks to the organizers and speakers This year's Dahl Nygaard award honored yet another pioneer in the field namely David Ungar for his contributions including Self I appreciate his efforts in providing us with an excellent award talk The world is changing and so is ECOOP Please contemplate my short note on the following pages entitled On Future Trends for ECOOP **Switchable**

Constraints for Robust Simultaneous Localization and Mapping and Satellite-Based Localization Niko

Sünderhauf, 2023-04-07 Simultaneous Localization and Mapping SLAM has been a long standing research problem in robotics It describes the problem of a robot mapping an unknown environment while simultaneously localizing in it with the help of the incomplete map This book describes a technique called Switchable Constraints Switchable Constraints help to increase the robustness of SLAM against data association errors and in particular against false positive loop closure detections Such false positive loop closure detections can occur when the robot erroneously assumes it re-observed a landmark it has already mapped or when the appearance of the observed surroundings is very similar to the appearance of other places in the map Ambiguous observations and appearances are very common in human made environments such as office floors or suburban streets making robustness against spurious observations a key challenge in SLAM The book summarizes the foundations of factor graph based SLAM techniques It explains the problem of data association errors before introducing the novel idea of Switchable Constraints We present a mathematical derivation and probabilistic interpretation of Switchable Constraints along with evaluations on different datasets The book shows that Switchable Constraints are applicable beyond SLAM problems and demonstrates the efficacy of this technique to improve the quality of satellite based localization in urban environments where multipath and non line of sight situations are common error sources

Technology of Object-oriented Languages and Systems : TOOLS 30 Donald G. Firesmith, 1999 The August 1999 conference concentrated on the delivery of high quality software on schedule and within budget offering practical experience from both industry and academia The 37 technical papers provide insights from lessons learned on real projects covering such topics as databases object oriented programming The E-business (r)evolution Daniel Amor, 2000 Throughout 2000 look to Prentice Hall PTR for the hottest new books written for technical professionals Each month the PH PTR Technology Focus will highlight some of today's most important technologies and the PTR titles which will help you get the job done These key books will be supported at conventions in magazine space ads on the WWW and in partnership with the finest bookstores throughout the country **OOIS'96** Dilipkumar Patel, Yuan Sun, Shushmaben Patel, 2012-12-06 This volume contains the papers presented

at the Third International Conference on Object Oriented Information Systems OOIS 96 which was held at South Bank University London The keynote addresses by Professor Colette Roland and Mr Ian Graham are also included The acceptance rate for papers was around 47% The papers for the Industry Day were invited papers The keynote paper by Professor Roland analyses the challenges in object modelling particularly the impact of requirements engineering for conceptual modelling She suggests innovative research perspectives to enhance and extend object oriented approaches in order to deal with the emerging area of requirements engineering The keynote paper presented by Mr Graham focuses on the problems and solutions for adopting use cases In his paper Graham illustrates the theoretical issues and practical problems of use cases and highlights them using examples The papers included in this volume cover different aspects of object modelling object oriented software development object databases and interoperability In the modelling session Ram et al outline an extended object model to tackle the problems of capturing complex requirements of office information systems Simons paper concentrates on core object modelling concepts and presents a mathematical theory of class *A System to Support Object-oriented Design Evolution* Jane Ching-Ying Wang,1997 Abstract In large scale software development design occurs in an evolutionary manner This is particularly true in object oriented development During the design evolution process many changes will be performed to different sets of objects Manually performing these changes and maintaining propagation of changes is a tedious and often quite complicated task In this thesis we present a framework for supporting design evolution We describe a uniform way to define the semantics of object change operators present a set of change operators that can be used to manage and control design evolution of an object oriented system and describe a uniform mechanism to define change operators
