Progress In Learning Disabilities Volume 1:

Progress in learning disabilities, 1968 **Progress in Learning Disabilities** Helmer R. Myklebust, 1968 **Learning and Cognition in Autism** Eric Schopler, Gary B. Mesibov, 2013-06-29 This volume like the other eight in the Current Issues in Autism series grew from our annual TEACCH conference The book is not however simply a compilation of conference proceedings Instead selected conference participants whose work has already achieved national and international recognition were asked to develop chapters around their presentations Other recognized experts in areas relevant to the conference theme were also asked to contribute chapters Although we were not able to include all of the workers who have contributed to the theme this volume represents our best effort to pull together for our readers the most current knowledge and state of the art practices Although aspects of cognition learning and behavioral motivation have been touched on for relevance to autism in other books in this series the growing integration of behavioral and cognitive theories has greatly enriched our educational interventions on behalf of autism While this volume does not include all the fascinating facets of this recent integration we believe that it offers useful information to teachers parents and researchers on some of the progress produced by their interaction

The Nature of Learning Disabilities Kenneth A. Kavale, Steven R. Forness, 2012-12-06 The category of learning disabilities continues to be among the most contentious in special education Much of the debate and dissent emanates from a lack of understanding about its basic nature The failure to evolve a comprehensive and unified perspective about the nature of learning disabilities has resulted in the concept being lost The loss is best illustrated through the failure to answer this seemingly simple question What is a learning disability Using historical empirical theoretical conceptual and philosophical analyses this volume explores a number of problems and issues facing the field of learning disabilities The chapters cover historical influences definitional problems primary characteristics assessment practices theoretical development major themes research and measurement models and long term outcomes The goal is to explicate the nature of learning disabilities by analyzing what it was supposed to be what it has become and what it might be A predominant theme running through this text is the necessity for the field of learning disabilities to regain integrity by recapturing its essence

Subtypes of Learning Disabilities Lynne V. Feagans, Elizabeth J. Short, Lynne Vernon-Feagans, Lynn J. Meltzer, 2012-11-12 Although experts agree that various types of learning disabilities do exist few attempts have been made to classify learning disabled children into subtypes The editors of this collection feel that the lack of subcategorization has frustrated previous research efforts to obtain a generalizable body of knowledge in the field To meet this critical need for definitive information this book presents basic reviews and theoretical approaches used to subtype learning disabled children ranging from a behavior genetics approach to a dimensional approach It also demonstrates actual research methods utilizing theoretical approaches

Learning Disability Subtyping Stephen R. Hooper, W. Grant Willis, 2013-11-11 The publication of this very important volume comes at a timely juncture in the history of learning disabilities The focus of this volume is on developing a multidisciplinary understanding of the complexities of the research on learning disabilities and its various subtypes It also will serve as an important compendium of the subtyping literature particularly with respect to pertinent issues of nosology specific subtyping models neuro psychological diagnosis and treatment As the authors so correctly suggest the differential diagnosis of learning disabilities subtypes is a critical first step in developing theoretically sound programs of psychoeducational intervention Clearly one must have some idea about the general abilities of a child before realistic expectations can be charted Also how can one plan a program of intervention without some knowledge of the deficient components of achievement within a domain Does it not make both conceptual and practical sense to identify an individual's relative strengths and weaknesses so that abilities or strengths can be utilized to optimize functioning in areas of deficit Although these all sound like reasonable precursors to assisting individuals in need of academic assistance there are those who would argue otherwise Importantly however the Director of the National Institutes

of Health in a recent report to Congress advocates exactly what this volume proposes. Indeed, there are important needs to be addressed and the literature reviewed herein strongly supports the conclusions drawn by these authors.
