## **Rapid Solidification Technology For Reduced Consumption Of Strategic Materials:**

Rapid Solidification Technology for Reduced Consumption of Strategic Materials J. E. Flinn, 1985      Strategic materials : technologies to reduce U.S. import vulnerability. ,      **Nondestructive Characterization of Materials II** Jean F. Bussière, Jean-Pierre Monchalain, Clayton O. Ruud, Robert E. Green, 2013-03-14 The possibility of nondestructively characterizing the microstructure morphology or mechanical properties of materials is certainly a fascinating subject In principle such techniques can be used at all stages of a material's life from the early stages of processing to the end of a structural component's useful life Interest in the subject thus arises not only from a purely scientific point of view but is also strongly motivated by economic pressures to improve productivity and quality in manufacturing to insure the reliability and extend the life of existing structures The present volume represents the edited papers presented at the Second International Symposium on the Nondestructive Characterization of Materials held in Montreal Canada July 21-23 1986 The Proceedings are divided into eight sections which reflect the multidisciplinary nature of characterizing materials nondestructively Polymers and Composites Ceramics and Powder Metallurgy Metals Layered Structures Adhesive Bonds Welding Degradation Aging Texture Anisotropy Stress and New Techniques Invited papers by R Hadcock of Grumman Aircraft Systems R Cannon of Rutgers University H Yada of Nippon Steel and R Bridenbaugh of Alcoa review respectively the processing of polymer matrix composites ceramics steel and aluminum emphasizing the need for material property sensors to improve process and quality control Two other invited papers one by A Wedgwood of Harwell and the other by P Holler of the IzFP in Saarbrücken review state of the art techniques to characterize particulate matter and metals respectively      Non-equilibrium Processing of Materials C. Suryanarayana, 1999-07-22 The rapid technological developments during the later half of the 20th century have demanded materials that are stronger capable of use at much higher temperatures more corrosion resistant and much less expensive than those currently used These demands become even more significant on the threshold of the new century and the millennium Significant improvements in properties can only be achieved by processing the materials under far from equilibrium or non equilibrium conditions Several new processing technologies have been developed during the past few decades including rapid solidification spray forming mechanical alloying ion mixing vapor deposition laser processing and plasma processing Remarkable advances have been made in recent years in the science and technology of these processes used to synthesize characterize and apply these materials processed under non equilibrium conditions Some of these techniques have evolved from laboratory curiosity to commercial scale manufacturing in just a few years In other cases industrial necessity prompted development of the technology and the science followed later The chapters in this book have been written by people who are world recognized experts in their respective fields Each chapter describes the principles processing techniques special features of the materials produced and their applications An extensive list of references is provided at the end of each chapter that will facilitate location of additional information on specific aspects of any technique
