Regular B Groups Degenerating Riemann Surfaces:

Regular b -Groups, Degenerating Riemann Surfaces, and Spectral Theory Dennis A. Hejhal, 1990 This paper is concerned with the spectral theory of the Laplacian as the underlying Riemann surface is pinched down to a surface with nodes The problem is attacked from the general standpoint of regular b groups and the Selberg trace formula **Sum of Even Powers of Real Linear Forms** Bruce Arie Reznick, 1992 This work initiates a systematic analysis of the representation of real forms of even degree as sums of powers of linear forms and the resulting implications in real algebraic geometry number theory combinatorics functional analysis and numerical analysis The proofs utilize elementary techniques from linear algebra convexity number theory and real algebraic geometry and many explicit examples and relevant historical remarks are presented *The Cumulative Book Index*, 1991 A world list of books in the English language *Annals of Mathematics*, 1977 Founded in 1884 Annals of Mathematics publishes research papers in pure mathematics **Encyclopaedia of Mathematics** Michiel Hazewinkel, 2013-12-01 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques [Theta Functions, Bowdoin 1987](#) Leon Ehrenpreis, Robert Clifford Gunning, 1989 During his long and productive career Salomon Bochner worked in a variety of different areas of mathematics This four part set brings together his collected papers illustrating the range and depth of his mathematical interests The books are available either individually or as a set **Locally Mixed Symmetric Spaces** Bruce Hunt, 2021-09-04 What do the classification of algebraic surfaces Weyl's dimension formula and maximal orders in central simple algebras have in common All are related to a type of manifold called locally mixed symmetric spaces in this book The presentation emphasizes geometric concepts and relations and gives each reader the roter Faden starting from the basics and proceeding towards quite advanced topics which lie at the intersection of differential and algebraic

geometry algebra and topology Avoiding technicalities and assuming only a working knowledge of real Lie groups the text provides a wealth of examples of symmetric spaces The last two chapters deal with one particular case Kuga fiber spaces and a generalization elliptic surfaces both of which require some knowledge of algebraic geometry Of interest to topologists differential or algebraic geometers working in areas related to arithmetic groups the book also offers an introduction to the ideas for non experts

Dynamical Systems I S.Kh. Aranson,I.U. Bronshtein,V.Z. Grines,Yu.S. Ilyashenko,1996-12-18 From the reviews The reading is very easy and pleasant for the non mathematician which is really noteworthy The two chapters enunciate the basic principles of the field indicate connections with other fields of mathematics and sketch the motivation behind the various concepts which are introduced What is particularly pleasant is the fact that the authors are quite successful in giving to the reader the feeling behind the demonstrations which are sketched Another point to notice is the existence of an annotated extended bibliography and a very complete index This really enhances the value of this book and puts it at the level of a particularly interesting reference tool I thus strongly recommend to buy this very interesting and stimulating book *Journal de Physique*

Topology, Geometry, Integrable Systems, and Mathematical Physics V. M. Buchstaber,B. A. Dubrovin, I. M. Krichever,2014-11-18 Articles in this collection are devoted to modern problems of topology geometry mathematical physics and integrable systems and they are based on talks given at the famous Novikov s seminar at the Steklov Institute of Mathematics in Moscow in 2012 2014 The articles cover many aspects of seemingly unrelated areas of modern mathematics and mathematical physics they reflect the main scientific interests of the organizer of the seminar Sergey Petrovich Novikov The volume is suitable for graduate students and researchers interested in the corresponding areas of mathematics and physics

The Monodromy Group Henryk Żołądek,2025-05-10 This book presents the monodromy group underlining the unifying role it plays in a variety of theories and mathematical areas In singularity theory and algebraic geometry the monodromy group is embodied in the Picard Lefschetz formula and the Picard Fuchs equations It has applications in the weakened 16th Hilbert problem and in mixed Hodge structures In the theory of systems of linear differential equations one has the Riemann Hilbert problem the Stokes phenomena and the hypergeometric functions with their multidimensional generalizations In the theory of homomorphic foliations there appear the Ecalle Voronin Martinet Ramis moduli Moreover there is a deep connection of monodromy theory with Galois theory of differential equations and algebraic functions The material is addressed to a wide audience ranging from specialists in the theory of ordinary differential equations to algebraic geometers Readers will quickly get introduced to modern and vital mathematical theories such as singularity theory analytic theory of ordinary differential equations holomorphic foliations Galois theory and parts of algebraic geometry without searching in vast literature This second edition has been enlarged by several sections presenting new results appeared since the first edition

Research in Progress ,1966 *Arithmetic Noncommutative Geometry* Matilde Marcolli,2005 Arithmetic Noncommutative Geometry uses ideas and tools from noncommutative geometry to address

questions in a new way and to reinterpret results and constructions from number theory and arithmetic algebraic geometry This general philosophy is applied to the geometry and arithmetic of modular curves and to the fibers at Archimedean places of arithmetic surfaces and varieties Noncommutative geometry can be expected to say something about topics of arithmetic interest because it provides the right framework for which the tools of geometry continue to make sense on spaces that are very singular and apparently very far from the world of algebraic varieties This provides a way of refining the boundary structure of certain classes of spaces that arise in the context of arithmetic geometry With a foreword written by Yuri Manin and a brief introduction to noncommutative geometry this book offers a comprehensive account of the cross fertilization between two important areas noncommutative geometry and number theory It is suitable for graduate students and researchers interested in these areas

Algorithmic Number Theory Claus Fieker, David R. Kohel, 2003-08-02 This book constitutes the refereed proceedings of the 5th International Algorithmic Number Theory Symposium ANTS V held in Sydney Australia in July 2002 The 34 revised full papers presented together with 5 invited papers have gone through a thorough round of reviewing selection and revision The papers are organized in topical sections on number theory arithmetic geometry elliptic curves and CM point counting cryptography function fields discrete logarithms and factoring Groebner bases and complexity

Random Matrix Theory with an External Source Edouard Brézin, Shinobu Hikami, 2017-01-11 This is a first book to show that the theory of the Gaussian random matrix is essential to understand the universal correlations with random fluctuations and to demonstrate that it is useful to evaluate topological universal quantities We consider Gaussian random matrix models in the presence of a deterministic matrix source In such models the correlation functions are known exactly for an arbitrary source and for any size of the matrices The freedom given by the external source allows for various tunings to different classes of universality The main interest is to use this freedom to compute various topological invariants for surfaces such as the intersection numbers for curves drawn on a surface of given genus with marked points Euler characteristics and the Gromov Witten invariants A remarkable duality for the average of characteristic polynomials is essential for obtaining such topological invariants The analysis is extended to nonorientable surfaces and to surfaces with boundaries

Differential Manifolds Antoni A. Kosinski, 2013-07-02 Introductory text for advanced undergraduates and graduate students presents systematic study of the topological structure of smooth manifolds starting with elements of theory and concluding with method of surgery 1993 edition

Proceedings of the International Congress of Mathematicians S.D. Chatterji, 2012-12-06 Since the first ICM was held in Zürich in 1897 it has become the pinnacle of mathematical gatherings It aims at giving an overview of the current state of different branches of mathematics and its applications as well as an insight into the treatment of special problems of exceptional importance The proceedings of the ICMs have provided a rich chronology of mathematical development in all its branches and a unique documentation of contemporary research They form an indispensable part of every mathematical library The Proceedings of the International

Congress of Mathematicians 1994 held in Zürich from August 3rd to 11th 1994 are published in two volumes Volume I contains an account of the organization of the Congress the list of ordinary members the reports on the work of the Fields Medalists and the Nevanlinna Prize Winner the plenary one hour addresses and the invited addresses presented at Section Meetings 1-6 Volume II contains the invited address for Section Meetings 7-19 A complete author index is included in both volumes the content of these impressive two volumes sheds a certain light on the present state of mathematical sciences and anybody doing research in mathematics should look carefully at these Proceedings For young people beginning research this is even more important so these are a must for any serious mathematics library The graphical presentation is as always with Birkhäuser excellent *Revue Roumaine de Mathématiques pures et Appliquées* **New Dualities of Supersymmetric Gauge Theories** Jörg Teschner, 2015-11-17 This book reviews a number of spectacular advances that have been made in the study of supersymmetric quantum field theories in the last few years Highlights include exact calculations of Wilson loop expectation values and highly nontrivial quantitative checks of the long standing electric magnetic duality conjectures The book starts with an introductory article presenting a survey of recent advances aimed at a wide audience with a background and interest in theoretical physics The following articles are written for advanced students and researchers in quantum field theory string theory and mathematical physics our goal being to familiarize these readers with the forefront of current research The topics covered include recent advances in the classification and vacuum structure of large families of $N=2$ supersymmetric field theories followed by an extensive discussion of the localisation method one of the most powerful tools for exact studies of supersymmetric field theories The quantities that have been studied in this way are partition functions expectation values of line operators and supersymmetric indices The book also reviews recently discovered connections between SUSY field theories in four dimensions and two dimensional conformal field theory These connections have a counterpart in relations between three dimensional gauge theories and Chern Simons theory the book's closing chapters explore connections with string theory Ordinary Differential Equations and Smooth Dynamical Systems D. V. Anosov, 1988 Special Values of Automorphic Cohomology Classes Mark Green, Phillip Griffiths, Matt Kerr, 2014-08-12 The authors study the complex geometry and coherent cohomology of nonclassical Mumford Tate domains and their quotients by discrete groups Their focus throughout is on the domains which occur as open orbits in the flag varieties for and regarded as classifying spaces for Hodge structures of weight three In the context provided by these basic examples the authors formulate and illustrate the general method by which correspondence spaces give rise to Penrose transforms between the cohomologies of distinct such orbits with coefficients in homogeneous line bundles *INIS Atomindex*, 1994
