Regulators and Effectors of Small GTPases, Part E: GTPases Involved in Vesicular Traffic, 2001-02-08 Small GTPases play a key role in many aspects of contemporary cell biology control of cell growth and differentiation regulation of cell adhesion and cell movement the organization of the actin cytoskeleton and the regulation of intracellular vesicular transport This volume and its companions Volumes 255 256 257 and the forthcoming 325 cover all biochemical and biological assays currently in use for analyzing the role of small GTPases in these aspects of cell biology at the molecular level **The British National Bibliography** Arthur James Wells, 2001 **Small GTPases and Their Regulators, Part C: Proteins Involved in Transport**, 1995-09-13 General Description of the Volume Small GTPases play a key role in many aspects of contemporary cell biology control of cell growth and differentiation regulation of cell adhesion and cell movement the organization of the actin cytoskeleton and the regulation of intracellular vesicular transport This volume plus its companion Volumes 255 and 256 cover all biochemical and biological assays currently in use for analyzing the role of small GTPases in these aspects of cell biology at the molecular level Volume 257 provides detailed protocols to effectively produce modify and assay for the function of small GTPases involved in vesicular traffic through the secretory pathway of eukaryotic cells General Description of the Series The critically acclaimed laboratory standard for more than forty years *Methods in Enzymology* is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences Key Features Assays to measure GTP exchange and hydrolysis Expression and purification of small GTPases Posttranslational modifications of Rab proteins Generation of trans dominant mutants Expression and purification of Rab effector proteins **Trafficking Inside Cells** Nava Segev, 2010-05-30 This book covers the past present and future of the intra cellular trafficking field which has made a quantum leap in the last few decades It details how the field has developed and evolved as well as examines future directions *Endocytosis and Signaling* Christophe Lamaze, Ian Prior, 2018-08-10 This book focuses on the context dependency of cell signaling by showing how the endosomal system helps to structure and regulate signaling pathways The location and concentration of signaling nodes regulate their activation cycles and engagement with distinct effector pathways Whilst many cell signaling pathways are initiated from the cell surface endocytosis provides an opportunity for modulating signaling networks output In this book first a series of reviews describe the endocytic and endosomal system and show how these subcellular platforms sort and regulate a wide range of signaling pathway components and phenotypic outputs The book then reviews the latest scientific insights into how endocytic trafficking and subcellular location modulate a set of major pathways that are essential to normal cellular function and organisms development **Cumulated Index Medicus**, 1994 **Rab GTPases and Membrane Trafficking** Guangpu

Li,Nava Segev,2012 Ypt Rab GTPases form the largest branch of the Ras related small GTPase superfamily and regulate intracellular membrane trafficking in all eukaryotes Since their discovery over two decades ago a wealth of information has accumulated about the roles that **Podocyte Pathology and Nephropathy** Barbara Lewko,Gavin Iain Welsh,Maciej Wojciech Jankowski,2015-11-30 The understanding of the pathogenesis of diabetic nephropathy DN has advanced considerably in the last few years Much has been learned about the natural history the relative lack of significance of microalbuminuria in reflecting underlying pathological change questionable effects of ACEs and ARBs on the progression of nephropathy the emergence of new biomarkers such as Cystatin and the role of cytokines inflammatory molecules and adhesion molecules Podocytes the cells with limited ability to replenish and to repair play a pivotal role in glomerular filtration In recent years these cells have become the focus for research on pathogenesis of DN as well as other nephropathies A recent review from the NIH has identified new insights into the pathophysiology the genetics and the role of the podocytes and some of the important new metabolic pathways such as mTOR or autophagy which may be targeting the podocyte Knowledge is emerging about the role of podocyte as a part of immune system and about the role of growth factors and cytokines in regulation of podocyte functions Presented in this e book articles highlight recent advances in our understanding of the pathogenesis of kidney pathology and the role of podocytes in this process **Ubiquitin Code: From Cell Biology to Translational Medicine** Lingqiang Zhang,Yu Rao,Cui Hua Liu,Daming Gao,Lixin Wan,2021-12-30

Biology and Pathogenesis of Legionella Hayley Newton,Elizabeth Hartland,Matthias Machner,2018-12-07 Legionella pneumophila was first isolated as the causative agent of a deadly infectious pneumonia at a convention of the American Legion forty years ago Since then Legionnaires disease continues to be a significant public health concern Today our understanding of the Legionella genus comprising environmental bacteria and opportunistic human pathogens has dramatically increased The study of how pathogenic Legionella interact with host cells both protozoan and mammalian has not only taught us about host pathogen interactions but has revealed novel and unexpected insights into human cell biology and immunology The capacity of pathogenic Legionella to commandeer cellular processes such as eukaryotic vesicular trafficking to establish an ER like replicative niche reflects the exquisite ability of this pathogen to manipulate eukaryotic cell biology in order to replicate in an intracellular compartment This requires the specific and targeted action of a cohort of translocated bacterial effector proteins In addition we have learnt much about cell autonomous innate immune sensing of intracellular bacteria through the inability of L pneumophila to avoid intracellular mammalian defense mechanisms Now in the age of large scale comparative omics it is clear that different Legionella species utilize different cohorts of effectors to replicate inside eukaryotic cells While we understand some of the strategies employed by L pneumophila and L longbeachae to replicate within eukaryotic cells there is still much to learn about many aspects of the Legionella life cycle This Research Topic highlights the latest findings regarding the biology of Legionella species their interactions with eukaryotic host cells
