Networks Daniel Hardy,Guy Malleus,Jean-Noel Mereur,2013-12-18 Revolution transformation upheaval and promise Yesterday the technologies of communication were accessible only to experts today they are a subject of constant discussion in the media New services are advertised on a daily basis and the potential realized or not of these technologies is a constant source of comment and discussion But beyond the media frenzy things really are developing with increasing speed driven by the power of the Internet The network has built up an ongoing relationship between research centres development teams and marketing teams allowing a constructive collaboration between technologies The network has become the catalyst for its own evolution The arrival of IP and GSM has given rise to new corporate giants like Cisco Systems and Nokia Operators witnessing the diversification of their main sources of revenue have been forced to merge or split Entirely new actors from various horizons are counting on their ability to act as operators without a network to their name Traditional equipment manufacturers have had to rethink their product lines in view of these new foundations Likewise governments have understood the need to create a body of laws that promote the harmonious and rapid development of networks to offer alternatives for operators and service providers These often complex regulations act both as constraint and opportunity for operators and give direction to the actions of actors across the board

Database Reengineering and Interoperability T.Y. Cheung, J. Fong, B. Siu, 2012-12-06 Modern computing management systems and application programs are often designed as open systems In an open environment the users application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable In case of databases because of the variety in data models and theory the interoperability and reengineering issues become even more complex and crucial especially for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors

Deductive and Object-Oriented Databases Stefano Ceri, Katsumi Tanaka, Shalom Tsur, 1993-11-16 This volume contains the proceedings of the Third International Conference on Deductive and Object Oriented Databases Its central tenet is that the object oriented and deductive paradigms for modeling organizing and processing data complement each other rather than competing and that problems involving massive volumes of complex data can best be solved by integrating the best of both approaches Central questions in the area are How do we design a tool that presents the best of the object oriented and declarative ideas How can the users of this tool express their problems in a combination of declarative and procedural features The volume includes 29 papers that contribute towards answering these questions

Introduction to Automation for Librarians William Saffady, 1994 Thoroughly revised third edition reflects advances in information processing networking storage and telecommunications Expanded coverage of programming languages and prewritten software packages local area networks electronic document imaging systems multimedia technologies and more
