Lahav, 1999-06-10 This book represents the proceedings of the 9th SDL Forum which was held in Montreal Quebec Canada during the week of June 21 25 1999 The 9th SDL Forum presents papers on the past and future development of the MSC and SDL languages The volume presents information on experience with the use of these languages in industrial development projects on tools and techniques for using these languages in the software and hardware development process and other aspects of these languages

UML 2000 - The Unified Modeling Language: Advancing the Standard Andy Evans, Stuart Kent, Bran Selic, 2003-06-29 This book constitutes the refereed proceedings of the Third International Conference on the Unified Modeling Language 2000 held in York UK in October 2000 The 36 revised full papers presented together with two invited papers and three panel outlines were carefully reviewed and selected from 102 abstracts and 82 papers submitted The book offers topical sections on use cases enterprise applications applications roles OCL tools meta modeling behavioral modeling methodology actions and constraints patterns architecture and state charts

SDL 2005: Model Driven Andreas Prinz, Rick Reed, Jeanne Reed, 2005-06-09 This volume contains the papers presented at the 12th SDL Forum Grimstad Norway The SDL Forum was first held in 1982 and then every two years from 1985 Initially the Forum was concerned only with the Specification and Description Language that was first standardized in the 1976 Orange Book of the International Telecommunication Union ITU Since then many developments took place and the language has undergone several changes However the main underlying paradigm has survived and it is the reason for the success of the Specification and Description Language in many projects This paradigm is based on the following important principles of distributed applications Communication large systems tend to be described using smaller parts that communicate with each other State the systems are described on the basis of an explicit notion of state State change the behavior of the system is described in terms of local changes of the state The original language is not the only representative for this kind of paradigm so the scope of the SDL Forum was extended quite soon after the first few events to also include other ITU standardized languages of the same family such as MSC ASN.1 and TTCN This led to the current scope of System Design Languages covering all stages of the development process including in particular SDL MSC UML ASN.1 eODL TTCN and URN The focus is clearly on the advantages to users and how to get from these languages the same advantage given by the ITU Specification and Description Language code generation from high level specifications

SDL 2001: Meeting UML Rick Reed, Jeanne Reed, 2003-06-29 This volume contains the papers presented at the Tenth SDL Forum Copenhagen SDL is the Specification and Description Language first standardized by the world telecommunications body the International Telecommunications Union ITU more than 20 years ago in 1976 While the original language and domain of application has evolved significantly the foundations of SDL as a graphical state transition and process communication language for real time systems have remained Today SDL has also grown to be one notation in the set of unified modelling languages recommended

by the ITU ASN 1 MSC SDL ODL and TTCN that can be used in methodology taking engineering of systems from requirements capture through to testing and operation The SDL Forum is held every two years and has become the most important event in the calendar for anyone involved in SDL and related languages and technology The SDL Forum Society that runs the Forum is a non profit organization whose aim it is to promote and develop these languages

Protocol Engineering Hartmut König,2012-10-09

Communication protocols form the operational basis of computer networks and telecommunication systems They are behavior conventions that describe how communication systems interact with each other defining the temporal order of the interactions and the formats of the data units exchanged essentially they determine the efficiency and reliability of computer networks Protocol Engineering is an important discipline covering the design validation and implementation of communication protocols Part I of this book is devoted to the fundamentals of communication protocols describing their working principles and implicitly also those of computer networks The author introduces the concepts of service protocol layer and layered architecture and introduces the main elements required in the description of protocols using a model language He then presents the most

important protocol functions Part II deals with the description of communication protocols offering an overview of the various formal methods the essence of Protocol Engineering The author introduces the fundamental description methods such as finite state machines Petri nets process calculi and temporal logics that are in part used as semantic models for formal description techniques He then introduces one representative technique for each of the main description approaches among others SDL and LOTOS and surveys the use of UML for describing protocols Part III covers the protocol life cycle and the most important development stages presenting the reader with approaches for systematic protocol design with various verification methods with the main implementation techniques and with strategies for their testing in particular with conformance and interoperability tests and the test description language TTCN The author uses the simple data transfer example protocol XDT eXample Data Transfer throughout the book as a reference protocol to exemplify the various description techniques and to demonstrate important validation and implementation approaches The book is an introduction to communication protocols and their development for undergraduate and graduate students of computer science and communication technology and it is also a suitable reference for engineers and programmers Most chapters contain exercises and the author's accompanying website provides further online material including a complete formal description of the XDT protocol and an animated simulation visualizing its behavior

Software Quality - ECSQ 2002 Jyrki Kontio, Reidar Conradi, 2003-08-01 Software professionals and companies live in a new world today Increasingly complex systems need to be built faster and cheaper While many of the established approaches in software quality are still valid the software quality community is going through a paradigm shift that requires a reassessment of our current method and tool portfolio as well as creating new and more effective solutions We have selected two themes for this conference to highlight this paradigm shift Our first theme production of attractive and reliable software at Internet speed sums up the dilemma many software organisations face In order to be competitive software should contain advanced features and run reliably yet it should be developed quickly and cost effectively for the right market window Finding the right balance between these objectives is a critical question that will determine business success in the years to come Our second theme production of software with a dynamic partnership in work highlights the current trend of using partnerships and subcontractors as integral players in the software development process Partnerships sometimes need to be created quickly to respond to a market opportunity yet the costs and speed of cooperation must be competitive Different companies have different processes quality tools and cultures yet they should cooperate seamlessly for the best result

required to establish the correspondences of the models and allow checking of their relative consistency The integration approach introduced in this book is based on a common semantic domain of abstract systems their composition and development Its applicability is shown through semantic interpretations and compositional comparisons of different specification approaches These range from formal specification techniques like process calculi Petri nets and rule based formalisms to semiformal software modeling languages like those in the UML family
