Marine Biodiversity of Costa Rica, Central America Ingo S. Wehrtmann, Jorge Cortés, 2008-12-28 Life began in the sea and even today most of the deep diversity of the planet is marine This is often forgotten especially in tropical countries like Costa Rica renowned for their rain forests and the multitude of life forms found therein Thus this book focusing on marine diversity of Costa Rica is particularly welcome How many marine species are there in Costa Rica The authors report a total of 6 777 species or 3 5% of the world's total Yet the vast majority of marine species have yet to be formally described Recent estimates of the numbers of species on coral reefs range from 1 9 million so that the true number of marine species in Costa Rica is certainly far higher In some groups the numbers are likely to be vastly higher because to date they have been so little studied Only one species of nematode is reported despite the fact that it has been said that nematodes are the most diverse of all marine groups In better studied groups such as mollusks and crustaceans reported numbers are in the

thousands but even in these groups many species remain to be described. Indeed the task of describing marine species is daunting if there really are about 9 million marine species and Costa Rica has 3.5% of them then the total number would be over 300 000. Clearly so much remains to be done that new approaches are needed. Genetic methods have enormous promise in this regard.

Echinoderm Research and Diversity in Latin America Juan José Alvarado, Francisco Alonso Solis-Marin, 2012-08-07. This book compiles for the first time the development of echinoderm research in Latin America. The book contains 17 chapters: one introductory, 15 country chapters, and a final biogeographic analysis. It compiles all the investigations published in international and local journals, reports, theses, and other gray literature. Each chapter is composed of 7 sections: introduction, describes the marine environments and main oceanographic characteristics, followed by a history of research, account divided by specific subjects. The next section addresses patterns of distribution and diversity. A specific section would explain fishery or aquaculture activities. The next sections deal with environmental and anthropogenic threats that are affecting echinoderm and any conservation or management action. Finally, a section with conclusions, needs, and new lines of research. The book will include two appendixes with species lists of all echinoderms with bathymetric data, habitat, and distribution.
