Searching For Alternatives:

Searching Alternatives M R Dixit, Siddarth Singh Bist, Sweety Shah, 2023-10-30 In the growth of societies business and entrepreneurship are regarded as two significant and determinative concerns Both notions in reality must be intertwined since they are the instruments for strengthening the stake on innovation creativity employment and economic growth As a result management and entrepreneurship education must be promoted and real life managerial entrepreneurial stories can serve as role models for young students in India The case study methodology is a significant pedagogy tool in the management education The book is an attempt to disseminate the innovative and practice based teaching material on management and entrepreneurship for higher education with a focus on real life contexts and practical learning The case studies in the book include a rich variety of managerial and entrepreneurial challenges that have to be understood and solved in the real world giving the student a dynamic experience on how to solve real world managerial and entrepreneurial challenges

Shift! Craig Elias, Tibor Shanto, 2010-06-25 There is a silver bullet in sales its called timing when you get to highly motivated decision makers at EXACTLY the right time after they experience a Trigger Event BUT before they call your competition When you have the right timing the sale almost happens by itself There are few challenges getting to the prospect understanding their dissatisfaction presenting a solution or closing the sale By luck or sheer numbers youve had timing happen before not its time to make it happen again and again and again simple but profound truths that will help you leverage intent for immediate action and cut down the selling cycle while creating lasting bonds with customers Stephen M R Covey author of the New York Times and 1 Wall Street Journal bestseller The Speed of Trust an entirely new perspective on things that are hiding in plain sight for all sales professionals Well done Kevin Fancey Senior Vice President of Sales Ricoh Canada Inc By combining the power of relationships with timing what Elias and Shanto call Trigger Events the authors present a powerful sales strategy Keith Ferrazzi 1 NYT Bestselling author of Who s Got Your Back and Never Eat Alone Elias and Shanto have brought referrals into the 21st Century showing you how to capitalize on the key moments that will bring you success in a busy fast paced world This is a must read Ivan Misner NY Times Bestselling author and Founder of BNI and the Referral Institute

Spatial Search Gunther Maier, 2012-12-06 Two areas have fascinated me for a long time One is the micro economic theory of consumer behavior the other one the role of space in economic processes Usually the two don t go together very well In more advanced versions of microeconomic consumer theory its economic actor may face uncertainty have to allocate resources over time or have to take into account the characteristics of products but rarely deals with space He she inhabits a spaceless point economy Regional Science on the other hand describes and analyzes the spatial structure and development of the economy but either ignores individual decision making altogether or treats it in a rather simplistic way In this book I try to bring together these two areas of interest of mine I do this by use of the microeconomic concept of search and placing it in an explicit spatial context The result in my opinion is a theoretical concept with fascinating

implications a broad set of potential implications and numerous interesting research questions After reading this book where I layout the basic idea of spatial search describe its elements and discuss some of its implications I hope the reader will share this opinion There are still plenty of unanswered research questions in this part of economic theory Hopefully this book will stimulate more work along these lines

Searching the Grey Literature Sarah Bonato, 2018-06-13 Searching the Grey Literature is for librarians interested in learning more about grey literature If you have ever been asked for a grey literature search but didn't know where to start this book will help you craft your search successfully If you are an expert searcher but find that your library patrons are unfamiliar with the vast body of grey literature this book may be a useful teaching aid Those that are both new arrivals and established professionals in the field of librarianship will learn much about grey literature from reading this book and hopefully acquire new search skills and knowledge Although a wide range of different types of librarians or information professionals may find the content of this book useful those working in the areas of health or social science will benefit the most from the book's content Searching the Grey Literature discuss different aspects of grey literature including an introduction to grey literature the value of grey literature search sources for grey literature and how to conduct needs assessment before beginning a grey literature search Search techniques for identifying grey literature documents selecting and evaluating grey literature search sources and best searching practices are also discussed in detail

State-Space Search Weixiong Zhang, 2012-12-06 This book is about problem solving Specifically it is about heuristic state space search under branch and bound framework for solving combinatorial optimization problems The two central themes of this book are the average case complexity of heuristic state space search algorithms based on branch and bound and their applications to developing new problem solving methods and algorithms Heuristic state space search is one of the fundamental problem solving techniques in Computer Science and Operations Research and usually constitutes an important component of most intelligent problem solving systems The search algorithms considered in this book can be classified into the category of branch and bound Branch and bound is a general problem solving paradigm and is one of the best techniques for optimally

solving computation intensive problems such as scheduling and planning The main search algorithms considered include best first search depth first branch and bound iterative deepening recursive best first search and space bounded best first search Best first search and depth first branch and bound are very well known and have been used extensively in Computer Science and Operations Research One important feature of depth first branch and bound is that it only requires space this is linear in the maximal search depth making it very often a favorable search algorithm over best first search in practice Iterative deepening and recursive best first search are the other two linear space search algorithms Iterative deepening is an important algorithm in Artificial Intelligence and plays an irreplaceable role in building a real time game playing program

Evaluating New Telecommunications Services Martin C.J. Elton, William A. Lucas, David W. Conrath, 2012-12-06 This book contains the proceedings of the first international symposium devoted to research on the evaluation and planning of new person to person telecommunication systems It was sponsored by NATO's Special Programme Panel on Systems Science and took place in September 1977 at the University of Bergamo in the north of Italy Telecommunication systems which provide for communication between people rather than computers or other instruments are of two kinds There are mass communication systems broadcast radio and television and interpersonal systems for example the telephone and Telex which join together individuals or small groups Here we have included in the interpersonal category certain systems for retrieving information from computers essentially those systems in which the role of the computer is primarily to act as a store and to identify that information which best fits a user's request This excludes management information systems in which the computer performs important transformation functions Distinctions between interpersonal and mass communication systems and between these two and data communication systems are increasingly breaking down for those who provide the services In the U K broadcasters are piloting information retrieval services and the British Post Office is competing with a more sophisticated system which could also be used for the exchange of messages Elsewhere computer data networks are increasingly employed for the exchange of personal messages
