Searching Multimedia Databases by Content Christos Faloutsos, 2012-12-06 *Searching Multimedia Databases by Content* bridges the gap between the database and signal processing communities by providing the necessary background information for the reader and presenting it along with the intuition and mechanics of the best existing tools in each area The first half of *Searching Multimedia Databases by Content* reviews the most successful database access methods in increasing complexity reaching up to spatial access methods and text retrieval In all cases the emphasis is on practical approaches that have been incorporated in commercial systems or that seem very promising The second half of the book uses the above access methods to achieve fast searching in a database of signals A general methodology is presented which suggests extracting a few good features from each multimedia object thus mapping objects into points in a metric space Finally the book concludes by presenting some recent successful applications of the methodology on time series and color images *Searching Multimedia Databases by Content* is targeted towards researchers and developers of multimedia systems The book can also serve as a textbook for a graduate course on multimedia searching covering both access methods as well as the basics of signal processing

Handbook of Video Databases Borko Furht, Oge Marques, 2003-09-30 Technology has spurred the growth of huge image and video libraries many growing into the hundreds of terabytes As a result there is a great demand among organizations for the design of databases that can effectively support the storage search retrieval and transmission of video data Engineers and researchers in the field demand a comprehensive

Digital Media Information Base: Proceedings Of The International Symposium Masatoshi Yoshikawa, Yahiko Kambayashi, Shunsuke

Uemura, 1998-03-12 With the rapid growth of computer and communication technologies the creation modification and distribution of digital multimedia information have become easier than ever Such multimedia information includes still images video audio texts and artifacts in virtual space The efficient storage of valuable information and rapid access to it is crucial to all modern organizations This proceedings volume consists of papers by researchers and academicians which explore the various aspects of the digital media information base A special emphasis is placed on new database system technologies

Artificial Intelligence Techniques for Computer Graphics Dimitri Plemenos, Georgios Miaoulis, 2008-10-02 The purpose of this volume is to present current work of the Intelligent Computer Graphics community a community growing up year after year Indeed if at the beginning of Computer Graphics the use of Artificial Intelligence techniques was quite unknown more and more researchers all over the world are nowadays interested in intelligent techniques allowing substantial improvements of traditional Computer Graphics methods The other main contribution of intelligent techniques in Computer Graphics is to allow invention of completely new methods often based on automation of a lot of tasks assumed in the past by the user in an imprecise and human time consuming manner The history of research in Computer Graphics is very edifying At the beginning due to the slowness of computers in the years 1960 the unique research concern was

visualisation The purpose of Computer Graphics researchers was to find new visualisation algorithms less and less time consuming in order to reduce the enormous time required for visualisation A lot of interesting algorithms were invented during these first years of research in Computer Graphics The scenes to be displayed were very simple because the computing power of computers was very low So scene modelling was not necessary and scenes were designed directly by the user who had to give coordinates of vertices of scene polygons

Nearest Neighbor Search: Apostolos N.

Papadopoulos, Yannis Manolopoulos, 2006-11-22 Modern applications are both data and computationally intensive and require the storage and manipulation of voluminous traditional alphanumeric and nontraditional data sets images text geometric objects time series Examples of such emerging application domains are Geographical Information Systems GIS Multimedia Information Systems CAD CAM Time Series Analysis Medical Information Systems On Line Analytical Processing OLAP and Data Mining These applications pose diverse requirements with respect to the information and the operations that need to be supported From the database perspective new techniques and tools therefore need to be developed towards increased processing efficiency This monograph explores the way spatial database management systems aim at supporting queries that involve the space characteristics of the underlying data and discusses query processing techniques for nearest neighbor queries It provides both basic concepts and state of the art results in spatial databases and parallel processing research and studies numerous applications of nearest neighbor queries

Morzy Tadeusz, Patrick Valduriez, Ladjel Bellatreche, 2015-08-14 This book constitutes the thoroughly refereed proceedings of the 19th East European Conference on Advances in Databases and Information Systems ADBIS 2015 held in Poitiers France in September 2015 The 31 full papers and 18 short papers presented were carefully selected and reviewed from 135 submissions The papers are organized in topical sections such as database theory and access methods user requirements and database evolution multidimensional modeling and OLAP ETL transformation extraction and archiving modeling and ontologies time series processing performance and tuning advanced query processing approximation and skyline confidentiality and trust

Big Data Kuan-Ching Li, Hai Jiang, Laurence T.

Yang, Alfredo Cuzzocrea, 2015-09-15 As today's organizations are capturing exponentially larger amounts of data than ever now is the time for organizations to rethink how they digest that data. Through advanced algorithms and analytics techniques organizations can harness this data, discover hidden patterns, and use the newly acquired knowledge to achieve competitive advantages. Presenting the contributions of leading experts in their respective fields, *Big Data: Algorithms, Analytics, and Applications* bridges the gap between the vastness of Big Data and the appropriate computational methods for scientific and social discovery. It covers fundamental issues about Big Data, including efficient algorithmic methods to process data, better analytical strategies to digest data, and representative applications in diverse fields such as medicine, science, and engineering. The book is organized into five main sections: Big Data Management considers the research issues related to the management of Big Data, including indexing and scalability aspects; Big Data Processing addresses the problem of processing Big Data across a wide range of resource-intensive computational settings; Big Data Stream Techniques and Algorithms explores research issues regarding the management and mining of Big Data in streaming environments; Big Data Privacy focuses on models, techniques, and algorithms for preserving Big Data privacy; Big Data Applications illustrates practical applications of Big Data across several domains, including finance, multimedia, tools, biometrics, and satellite. Big Data processing. Overall, the book reports on state-of-the-art studies and achievements in algorithms, analytics, and applications of Big Data. It provides readers with the basis for further efforts in this challenging scientific field that will play a leading role in next-generation database, data warehousing, data mining, and cloud computing research. It also explores related applications in diverse sectors covering technologies for media, data communication, elastic media, data storage, cross-network media, data fusion, and SaaS.

Reconfigurable Computing: Architectures, Tools and Applications Pedro C. Diniz, 2007-03-19 This book constitutes the refereed proceedings of the Third International Workshop on Applied Reconfigurable Computing (ARC 2007) held in Mangaratiba, Brazil, in March 2007. The 27 full papers and 10 short papers presented together with a late-comer contribution from ARC 2006 are organized in topical sections on architectures, mapping techniques, and tools, arithmetic, and applications.
