Manapes Or Apemen The Story Of Discoveries In Africa:

Man-apes Or Ape-men? Wilfrid Edward Le Gros Clark, 1976 *Scientific Racism in Modern South Africa* Saul Dubow, 1995-06-30 A study of the history of intellectual and scientific racism in modern South Africa **The Strange Case of the Rickety Cossack** Ian Tattersall, 2015-06-09 In his new book *The Strange Case of the Rickety Cossack* human paleoanthropologist Ian Tattersall argues that a long tradition of human exceptionalism in paleoanthropology has distorted the picture of human evolution Drawing partly on his own career from young scientist in awe of his elders to crotchety elder statesman Tattersall offers an idiosyncratic look at the competitive world of paleoanthropology beginning with Charles Darwin 150 years ago and continuing through the Leakey dynasty in Africa and concluding with the latest astonishing findings in the Caucasus The book's title refers to the 1856 discovery of a clearly very old skull cap in Germany's Neander Valley The possessor had a brain as large as a modern human but a heavy low braincase with a prominent brow ridge Scientists tried hard to explain away the inconvenient possibility that this was not actually our direct relative One extreme interpretation suggested that the preserved leg bones were curved by both rickets and by a life on horseback The pain of the unfortunate individual's affliction had caused him to chronically furrow his brow in agony leading to the excessive development of bone above the eye sockets The subsequent history of human evolutionary studies is full of similarly fanciful interpretations With tact and humor Tattersall concludes that we are not the perfected products of natural processes but instead the result of substantial doses of random happenstance *Man-apes Or Ape-men?* Wilfrid Edward Le Gros Clark, 1967 General History of Africa International Scientific Committee for the drafting of a General History of Africa, 1981-12-31 One of UNESCO's most important publishing projects in the last thirty years the General History of Africa marks a major breakthrough in the recognition of Africa's cultural heritage Offering an internal perspective of Africa the eight volume work provides a comprehensive approach to the history of ideas civilizations societies and institutions of African history The volumes also discuss historical relationships among Africans as well as multilateral interactions with other cultures and continents **The Evolution of the Primate Hand** Tracy L. Kivell, Pierre Lemelin, Brian G. Richmond, Daniel Schmitt, 2016-08-10 This book demonstrates how the primate hand combines both primitive and novel morphology both general function with specialization and both a remarkable degree of diversity within some clades and yet general similarity across many others Across the chapters different authors have addressed a variety of specific questions and provided their perspectives but all explore the main themes described above to provide an overarching primitive primate hand thread to the book Each chapter provides an in depth review and critical account of the available literature a balanced interpretation of the evidence from a variety of perspectives and prospects for future research questions In order to make this a useful resource for researchers at all levels the basic structure of each chapter is the same so that information can be easily consulted from chapter to chapter An extensive reference list is provided at the end of each chapter so the reader has additional resources to

address more specific questions or to find specific data

Debating Humankind's Place in Nature, 1860-2000 Richard G. Delisle, 2015-07-14 This text the only one of its kind on the market surveys the development of the field of human evolution from its inception through today It provides students with a broad contrast enabling them to fully understand the value and role of current paleoanthropological research Features An historical approach Establishes for students the nature of paleoanthropology through the historical development of the field from 1860 through 2000 and shows students that paleoanthropology is a remarkably progressive field A focus on the debates in the field of human evolution especially the phylogenetic or genealogical debates Analyzes four distinct debates presented separately from their inception to the present

- 1 Humankind s place among the primates
- 2 The place of the australopithecines relative to the human line
- 3 Debates on human phylogeny proper
- 4 Proposed scenarios of hominization

Presentation and analysis of the viewpoints of over 150 scholars Gives students a valuable reference work for the future includes over 1200 references in the bibliography as well as a comprehensive text for today For junior senior courses in Human Evolution and Paleoanthropology in Anthropology departments

Methodology and African Prehistory Jacqueline Ki-Zerbo, Unesco. International Scientific Committee for the Drafting of a General History of Africa, 1981 The result of years of work by scholars from all over the world The UNESCO General History of Africa reflects how the different peoples of Africa view their civilizations and shows the historical relationships between the various parts of the continent Historical connections with other continents demonstrate Africa s contribution to the development of human civilization Each volume is lavishly illustrated and contains a comprehensive bibliography

The Fossil Trail Ian Tattersall, 1995 In *The Fossil Trail* Ian Tattersall the head of the Anthropology Department at the American Museum of Natural History takes us on a sweeping tour of the study of human evolution offering a colorful history of fossil discoveries and a revealing insider s look at how these finds have been interpreted and misinterpreted through time All the major figures and discoveries are here We meet Lamarck and Cuvier and Darwin we learn that Darwin s theory of evolution though a bombshell was very congenial to a Victorian ethos of progress right up to modern theorists such as Niles Eldredge and Stephen Jay Gould

Paleoanthropology Russell H. Tuttle, 2011-05-12 No detailed description available for Paleoanthropology

A View to a Death in the Morning Matt Cartmill, 2009-07-01 *A View to a Death in the Morning* shows us how hunting has figured in the Western imagination from the myth of Artemis to the tale of Bambi This book will captivate readers on every side of the dilemma from the most avid hunters to their most vehement opponents to those who simply wonder about the importance of hunting in human nature

Understanding Human Evolution Ian Tattersall, 2022-07-28 Human life and how we came to be is one of the greatest scientific and philosophical questions of our time This compact and accessible book presents a modern view of human evolution Written by a leading authority it lucidly and engagingly explains not only the evolutionary process but the technologies currently used to unravel the evolutionary past and emergence of Homo sapiens By separating the history of palaeoanthropology from current

interpretation of the human fossil record it lays numerous misconceptions to rest and demonstrates that human evolution has been far from the linear struggle from primitiveness to perfection that we've been led to believe. It also presents a coherent scenario for how *Homo sapiens* contrived to cross a formidable cognitive barrier to become an extraordinary and unprecedented thinking creature. Elegantly illustrated. Understanding Human Evolution is for anyone interested in the complex and tangled story of how we came to be.

The Human Lineage Matt Cartmill, Fred H. Smith, 2009-03-30 This textbook aimed at advanced undergraduates and postgraduates in paleoanthropology courses tackles a rather difficult task that of presenting the substantial body of paleontological, genetic, geological, and archaeological evidence regarding human evolution and the associated scientific history in a logical and readable way without sacrificing either clarity or detail. The sheer quality of the writing and explanatory synthesis in this book will undoubtedly make it a valuable resource for students for many years. PaleoAnthropology 2010 This book focuses on the last ten million years of human history from the hominoid radiations to the emergence and diversification of modern humanity. It draws upon the fossil record to shed light on the key scientific issues, principles, methods, and history in paleoanthropology. The book proceeds through the fossil record of human evolution by historical stages representing the acquisition of major human features that explain the success and distinctive properties of modern *Homo sapiens*. Key features: Provides thorough coverage of the fossil record and sites with data on key variables such as cranial capacity and body size estimates. Offers a balanced critical assessment of the interpretative models explaining pattern in the fossil record. Each chapter incorporates a Blind Alley box focusing on once prevalent ideas now rejected such as the arboreal theory, seed eating, single species hypothesis, and Piltdown man. Promotes critical thinking by students while allowing instructors flexibility in structuring their teaching. Densely illustrated with informative, well-labelled anatomical drawings and photographs. Includes an annotated bibliography for advanced inquiry. Written by established leaders in the field providing depth of expertise on evolutionary theory and anatomy through to functional morphology. This textbook is essential reading for all advanced undergraduate students and beginning graduate students in biological anthropology.

Evolution of The Brain and Intelligence Harry Jerison, 2012-12-02 Evolution of the Brain and Intelligence covers the general principles of behavior and brain function. The book is divided into four parts encompassing 17 chapters that emphasize the implications of the history of the brain for the evolution of behavior in vertebrates. The introductory chapter covers the studies of animal behavior and their implications about the nature of the animal's world. The following chapters emphasize methodological issues and the meanings of brain indices and brain size as well as the general anatomy of the brain. Other chapters discuss the history of the brain in the major vertebrate groups that were known about 300 million years ago to determine the fate of these early vertebrate groups. Discussions on broad trends in evolution and their implications for the evolution of intelligence are also included. Substantive matter on the brain's bodies and associated mechanisms of behavior of vertebrates are covered in the remaining chapters of the book with an emphasis on evolution.

above the species level This book is of value to anthropologists behavioral scientists zoologists paleontologists and neurosciences students **Ancestral Passions** Virginia Morell,2011-01-11 This biography of the First Family of anthropology reveals how their discoveries collaborations and rivalries contributed to our own knowledge of the origins of humankind In this fascinating and authoritative work acclaimed science writer Virginia Morell brings to vivid life the famous and infamous Leakey family pioneers in the field of paleoanthropology Louis Leakey the patriarch who persisted through initial scientific failures and scandal ridden divorce to achieve spectacular success in digs throughout East Africa Mary his second wife who worked alongside Louis as they made their outstanding discoveries at Olduvai Gorge and elsewhere and Richard their son who ascended to the top of the field in his parents wake only to be threatened with both near fatal illness and fierce professional rivalry Morell transports us into the world of these compelling personalities demonstrating how a small clan of highly talented and fiercely competitive people came to dominate an entire field of science and to contribute immeasurably to our understanding of the origins of humanity Primate Locomotion Farish A. Jr. Jenkins,2012-12-02 Primate Locomotion discusses researches on the concept of primate locomotion It is organized into 11 chapters that cover biomechanical principles which are the foundation of understanding of locomotor adaptations This book first gives an introduction to parallels and analogs between mammalian and mechanical structures It then describes the mechanisms of arboreal mammal locomotion as well as the behavioral observations and locomotor patterns of tree shrew The jumping locomotion of *Galago alleni* and the role of wrist specialization in the locomotor evolution of the Hominoidea are also explained The subsequent chapter discusses the relationship between the mechanical features of the scapula and shoulder region and the characteristics of locomotor behavior A chapter also discusses the adaptive nature of postural behavior in quadrupedal primates represented by the New and Old World monkeys Moreover this book examines the morphological differences between living Insectivora Carnivora Primates and the relevant known fossils of Cretaceous and Early Tertiary Eutheria This is to evaluate the origins evolution and function of the Tarsus Another chapter presents a functional analysis of most of the foot skeleton primarily the Lemuriformes The concluding chapters deal with electromyographical studies on gorillas the mechanics of knuckle walking the theories on hominoid phylogeny and the locomotor adaptations in prosimians This text is intended not only for researchers dealing with primate locomotion but equally for students and others who share an interest in mammals and locomotor adaptations Elwyn Simons: A Search for Origins John G Fleagle,Christopher C. Gilbert,2007-12-03 For nearly a half century Dr Simons has dominated the study of primate evolution This volume summarizes the current state of knowledge in many aspects of primate and human evolution that have been studied by Simons and his colleagues and place it in a broader paleontological and historical perspective The book contains the results of new research as well as reviews of many of the critical issues in primate and human evolution during the last half of the twentieth century **Wiley-Blackwell Encyclopedia of Human Evolution** Bernard Wood,2011-03-31 This comprehensive

A to Z encyclopedia provides extensive coverage of important scientific terms related to improving our understanding of how we evolved. Specifically the 5 000 entries in this two volume set cover evidence and methods used to investigate the relationships among the living great apes, evidence about what makes the behavior of modern humans distinctive, and evidence about the evolutionary history of that distinctiveness, as well as information about modern methods used to trace the recent evolutionary history of modern human populations. This text provides a resource for everyone studying the emergence of Homo sapiens. Culture Evolves Andrew Whiten, 2012. Culture broadly defined as all we learn from others that endures for long enough to generate customs and traditions shapes vast swathes of our lives and has allowed the human species to dominate the planet in an evolutionarily unique way. Culture and cultural evolution are uniquely significant phenomena in evolutionary biology; they are products of biological evolution yet they supplement genetic transmission with social transmission, thus achieving a certain independence from natural selection. However, cultural evolution nevertheless expresses key Darwinian processes itself and also interacts with genetic evolution. Just how culture fits into the grander framework of evolution is a big issue, though yet one that has received relatively little scientific attention compared to, for example, genetic evolution. Our capacity for culture appears so distinctive among animals that it is often thought to separate us, cultural beings, from the rest of nature and the Darwinian forces that shape it. Culture Evolves presents a different view arising from the recent discoveries of a diverse range of disciplines that focus on evolutionary continuities. First, recent studies reveal that learning from others and the transmission of traditions are more widespread and significant across the animal kingdom than earlier recognized, helping us understand the evolutionary roots of culture. Second, archaeological discoveries have pushed back the origins of human culture to much more ancient times than traditionally thought. These developments together suggest important continuities between animal and human culture. A third, new array of discoveries concerns the later diversification of human cultures where the operations of Darwinian-like cultural evolutionary processes are increasingly identified. Finally, surprising discoveries have been made about the imprint of cultural evolution in children's predisposition to acquire culture. The result of a major interdisciplinary meeting held by the Royal Society and the British Academy, this book presents the work of leading experts from the fields of ethology, behavioural ecology, primatology, comparative psychology, archaeology, anthropology, evolutionary biology, and developmental psychology.

Learning and Emotion: Evolutionary processes Peter J. Livesey, 1986. First published in 1986. Routledge is an imprint of Taylor Francis, an informa company.
