Issues in Psychotherapy Research Michel Hersen,Alan S. Bellack,2013-11-21 Psychotherapy research is undoubtedly one of the most puzzling diverse complex controversial and multidimensional areas tackled by clinical psychologists psychiatrists and psychiatric social workers The numerous theoretical methodological and clinical research issues dealt with by workers in the field have increased exponentially in the past three decades To do full justice to the area monographs in each of the specific subareas would be warranted In this volume we as editors have endeavored to present the student and interested professional and practitioner with an understanding of the most salient issues and trends confronted by the psychotherapy researcher In order to accomplish this task we asked our colleagues who are experts in their respective areas to share their current thinking with us and with you the readers Thus many theoretical viewpoints are

represented with none having a monopoly over the others This is as it should be given the data collected by clinical researchers at this time We have also attempted to capture the excitement that has permeated the field in the past 30 years or so *Scientific Directory and Annual Bibliography* National Institutes of Health (U.S.),1982 Published Scientific Papers of the National Institutes of Health National Institutes of Health (U.S.),1982 Each issue lists papers published during the preceding year *Application of Basic Neuroscience to Child Psychiatry* S.I. Deutsch,A. Weizman,R.

Weizman,2012-12-06 The idea for this book developed during the course of several discussions among the editors while we were working together as staff scientists in the laboratories of the Clinical Neuro science Branch of the National Institute of Mental Health It was a happy coincidence that the three of us child psychiatrists with predominantly clinical interests selected a collaborative bench research project involving neurotransmitter receptor characterization and regulation We appreciated the relevance of our work to child psychiatry and wished for a forum to share the excitement we enjoyed in the laboratory with our clinical colleagues Moreover it seemed to us that much of the pharmacological research in child psychiatry proceeded on an empirical basis often without a compelling neurochemical rationale This could reflect the paucity of neurochemical data that exists in child psychiatry and the very limited understanding of the pathophysiology in most psychiatric disorders that occur in childhood Also we bemoaned the fact that there was a virtual absence of meaningful interchange between clinical investigators in child psychiatry and their colleagues in the neurosciences We believed that an edited book appealing to clinicians and basic scientists could serve as an initial effort to foster interchange between them The editors wish to emphasize that this book is viewed as only a beginning in the process of interchange that must take place
