Human Impact on the Earth William B. Meyer, 1996-02-23 At a level accessible to the general reader this balanced and non polemical book describes the changes human activities have produced in the global environment from 300 years ago to today *The Earth as Transformed by Human Action* B. L. Turner, William C. Clark, Robert W. Kates, John F. Richards, Jessica T. Mathews, William B. Meyer, 1993-01-29 The Earth as Transformed by Human Action is the culmination of a mammoth undertaking involving the examination of the toll our continual strides forward technical and social take on our world The purpose of such a study is to document the changes in the biosphere that have taken place over the last 300 years to contrast global patterns of change to those appearing on a regional level and to explain the major human forces that have driven these changes The first section deals strictly with the major human forces of the past 300 years and the second is a detailed account of the transformations of the global environment wrought by human action The final section examines a range of perspectives and theories that purport to explain human actions with regard to the biosphere

Silicon Versus Carbon Yuri Magarshak,Sergey Kozyrev,Ashok K. Vaseashta,2009-05-21 Even though there is no generally accepted definition of nanotechnologies to be

defined as distinct discipline there is an emerging consensus that their advent and development is a growing in importance factor of the contemporary and future technological civilization One of these most fundamental issues we are confronted with is the compatibility with life itself From single cell organisms to humans carbon is a key building block of all molecular structures of life In contrast the man created electronic industry to build on other elements of which silicon is the most common Both carbon and silicon create molecular chains although different in their internal structure All life is built from carbon based chains As long as the man built technological products do not directly interfere with the physiology of life the associated risks from them are relatively easy to identify They are primarily in the environmental pollution and the possibility of upsetting the natural balance of biocoenosis on a planetary scale The basic life functions are still not directly subverted We can use TV computers drive cars and use other technological utilities without fear of direct interference with our cellular functions This is in particular because all these technological utilities are many orders of magnitude larger than typical scales of biological activity Most of biological activity from fermentative catalysis to DNA replication takes place on nanoscale The situation is radically different when the technological goals are building nanoscale size products All biological processes take place on nanoscale
