Man's Place in Nature and Other Essays Thomas Henry Huxley, 1933 [Man's Place in Nature, and Other Anthropological Essays](#) Thomas Henry Huxley, 1894 **Man's Place in Nature and Other Essays (1906)** Thomas Henry Huxley, 2008-06 This scarce antiquarian book is a facsimile reprint of the original. Due to its age, it may contain imperfections such as marks, notations, marginalia, and flawed pages. Written during the late Victorian era, a time of burgeoning scientific discovery, Huxley's work synthesizes paleontological evidence, anatomical observations, and comparative biology to argue that humans are part of the natural continuum of life. His literary style is clear and persuasive, characterized by logical reasoning and a commitment to empirical evidence, which reflects the spirit of inquiry prevalent in the emerging field of evolutionary biology during this period. Huxley, often dubbed Darwin's Bulldog for his advocacy of Charles Darwin's theories, was a biologist and anthropologist who played a pivotal role in popularizing evolutionary thought. His background in comparative anatomy and his own struggles against the prevailing dogmatic views of his time likely inspired him to confront societal norms regarding humanity's place in the natural order. Huxley's intellect, combined with his commitment to scientific truth, positions him as a crucial figure in the history of science. This book is essential for anyone interested in the intersections of science, philosophy, and human identity. Huxley's insights resonate today, urging readers to reflect on the implications of evolution for understanding our own nature. It is a compelling read for scholars, students, and curious minds alike. *Man's Place in Nature* Thomas Henry Huxley, 2015-07-09 Excerpt from *Man's Place in Nature And Other Essays*. Forty years ago, the position of scientific studies was not so firmly established as it is today, and a conflict was necessary to secure their general recognition. The forces of obscurantism and of free and easy dogmatism were arrayed against them, and just as in former centuries astronomy and in more recent times geology, so in our own lifetime biology has had to offer a harsh and fighting front lest its progress be impeded by the hostility born of preconceived opinions and by the bigotry of self-appointed guardians of conservative views. The man who probably did as much as any to fight the battle of science in the nineteenth century and secure the victory for free enquiry and progressive knowledge is Thomas Henry Huxley, and it is an interesting fact that already the lapse of time is making it possible to bring his writings in cheap form to the notice of a multitude of interested readers. The pugnacious attitude, however, which forty years ago was appropriate, has become a little antique now.

the conflict is not indeed over but it has either totally shifted its ground or is continued on the old battlefield chiefly by survivors and by a few of a younger generation who have been brought up in the old spirit The truths of materialism now run but little risk of being denied or ignored they run perhaps some danger of being exaggerated Brilliantly true and successful in their own territory they are occasionally pushed by enthusiastic disciples over the frontier line into regions where they can do nothing but break down As if enthusiastic worshippers of motor cars proud of their performance on the good roads of France should take them over into the Sahara or essay them on a Polar expedition About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

This powerful book provides the first comprehensive overview of the intellectual roots of the worldwide environmental movement from ancient religions and philosophies to modern science and ethics and synthesizes them into a new philosophy of nature in which to ground our moral values and social action It traces the origins and evolution of the dominant worldview

that has built our industrial technocratic man centered civilization and brought us to the current ecological crisis At the same time it uncovers an alternative cultural tradition in the world s different religions and philosophies and describes how these ideas are now surfacing and coalescing to form an ecological sensibility and a new vision of nature which recognizes the inter relatedness of all living things Finally this book integrates these varied traditions with modern physics and the science of ecology into a larger philosophical whole that provides the environmental movement with a comprehensive vision of an organic and sustainable society in harmony with nature As ecological disasters continue to threaten our planet becoming worse with every passing moment of indifference it has become clear that we must take action We must change our relationship with nature and return to the days when our lives were intimately connected to and dependent upon the natural world Nature s Web lays the foundations for that change by explaining where our complex ideas about nature come from why they are wrong and what we can do to change them

Man's Place in the Cosmos, and Other Essays ... Second Edition, Revised and Enlarged Andrew Seth Pringle-Pattison, 1902 *Fictions of Certitude* John S. Haller, 2020-03-24 The search for belief and meaning among nineteenth century intellectuals The nineteenth century s explosion of scientific theories and new technologies undermined many deep seated beliefs that had long formed the basis of Western society making it impossible for many to retain the unconditional faith of their forebears A myriad of discoveries including Faraday s electromagnetic induction Joule s law of conservation of energy Pasteur s germ theory Darwin s and Wallace s theories of evolution by natural selection and Planck s

work on quantum theory shattered conventional understandings of the world that had been dictated by traditional religious teachings and philosophical systems for centuries

Fictions of Certitude: Science, Faith, and the Search for Meaning, 1840-1920 investigates the fin de siècle search for truth and meaning in a world that had been radically transformed

John S. Haller Jr. examines the moral and philosophical journeys of nine European and American intellectuals who sought deeper understanding amid such paradigmatic upheaval: Auguste Comte, John Henry Newman, Herbert Spencer, Alfred Russel Wallace, Thomas Henry Huxley, John Fiske, William James, Lester Frank Ward, and Paul Carus. All belonged to an age in which one world was passing while another world that was both astounding and threatening was rising to take its place. For Haller, what makes the work of these nine thinkers worthy of examination is how they strove in different ways to find certitude and belief in the face of an epochal sea change. Some found ways to reconceptualize a world in which God and nature coexist. For others, the challenge was to discern meaning in a world in which no higher power or purpose can be found. As explained by D. H. Meyer, "The later Victorians were perhaps the last generation among English-speaking intellectuals able to believe that man was capable of understanding his universe just as they were the first generation collectively to suspect that he never would."
