Practical Guide to Heart Failure in Older People Chris Ward, Miles Witham, 2009-03-23 Heart failure is effectively a disease of older people Eighty percent of patients are over 65 years old and the majority of these are over 75 This figure is likely to increase significantly in the next two decades The prognosis is worse than that of most cancers and heart failure is the commonest reason for hospital admission in the over 65s The problems associated with treating heart failure in older patients are more diverse and complex than in those who are younger The diagnosis in older patients is easily overlooked and as they were excluded from most heart failure treatment trials there has been a reluctance to treat them optimally fewer

than 20% are prescribed conventional medicines. They have multiple co-morbidities which are poorly managed; they are repeatedly hospitalised and suffer social isolation. These important age-related treatment and management problems have been largely ignored, and this book aims to redress the balance. It provides a concise, comprehensive account of the epidemiology, pathogenesis, diagnosis, treatment, management, and end-of-life care of elderly patients with heart failure based on published studies. *A Practical Guide to Heart Failure in Older People* is essential reading for geriatricians, cardiologists, general hospital physicians, family practitioners, and specialist nurses. Specifically, it addresses the particular needs of the elderly, a largely ignored group who constitute the majority of patients with heart failure. Presents a concise yet comprehensive account of the evidence relating to the diagnosis, treatment, and management of heart failure in this population. Improves awareness of the various roles within the management team.

Rights of the Elderly Fred C. Pampel, 2008. *Rights of the Elderly* provides an overview of the history of this timely topic and the opinions surrounding it from the Social Security Act of 1935 to the current activism of groups such as AARP and the Gray Panthers. Examining recent court cases such as *Kathi Cooper et al v IBM Personal Pension Plan and IBM Corporation* and documents such as *The Age Discrimination in Employment Act of 1967*, this new volume provides multiple perspectives and decisions surrounding this issue while also plotting a course for the future of legislative action. A comprehensive and up-to-date overview, essay, capsule biographies, a large annotated bibliography, a chronology of significant events, organization and agency listings, and a glossary provide useful information for students, teachers, librarians, older persons, activists, policy makers, and the general reader interested in this controversial issue.

Geriatric Mental Health Ethics Shane S. Bush, 2008-09-30. The book's genuine value is that it provides the reader with a solid foundation in ethical competence. The ten-step ethical decision-making model described is a clear, structured roadmap to aid in the resolution of common ethical problems. A welcome resource to all geriatric mental health students, practitioners, and educators. From the Afterword by Frank A. Cervo, MD, Long Island State Veterans Home, Stony Brook University School of Medicine. Detailed case studies will guide practitioners through Bush's Four A's of ethical decision-making: Anticipating and preparing for ethical issues commonly encountered in specific contexts; Avoiding ethical misconduct; Addressing ethical challenges with specific strategies and goals; Aspiring to even higher standards of ethical decision-making and practice. Making informed ethical decisions and choosing the right course of action with elderly patients can prove difficult for mental health practitioners. This is especially true when patients suffer from Alzheimer's disease or other disorders that impair their own decision-making abilities. When confronting dilemmas concerning privacy, informed consent, and patient autonomy, use of an ethical decision-making model is essential. In this book, Bush not only presents this practical 10-step model but, through a diverse collection of case studies, also demonstrates how it can be implemented across numerous therapeutic settings. Nursing, social work, counseling, and psychiatry are only four of the many settings discussed. In essence, the author offers a truly unique interdisciplinary approach to ethical decision-making in
