Richmond, Julie Stevenson, 2017-10-05 The pharmaceutical industry has changed beyond all recognition in the past 100 years. The modern industry is constantly in the news as new breakthroughs in medical treatment are announced, often provoking ethical and social debates about the implications of new technologies. This volume facilitates the study of the industry by providing information on the present location of pharmaceutical archives. The core of the book consists of a business-by-business guide to the industry's records. Each entry includes a brief history of the company, a summary of its surviving archives, and a bibliography of related publications. Similar entries exist for trade associations and schools of pharmacy associated with the industry, and there are two appendices listing small collections of records held and relevant public records. The historical compendium is supplemented by three introductory essays written by leading academics in the field, outlining the history of the industry and describing the nature and uses of the archival records which it has created. These essays are supplemented by a select chronology of pharmaceutical legislation and a select bibliography of histories relating to the pharmaceutical industry in general. A user's guide helps readers understand how the business entries were constructed and is supplemented by a glossary of terms used in this book. As such, this book will no doubt prove an invaluable resource to researchers undertaking comparative studies of the pharmaceutical industry, the history of medicine, and the retailing of medical drugs.

Erasmus Darwin's Gardens Paul A. Elliott, 2021 This first full study of Erasmus Darwin's gardening, horticulture, and agriculture shows he was as keen a nature enthusiast as his grandson Charles and demonstrates the ways in which his landscape experiences transformed his understanding of nature. Famous as the author of the *Botanic Garden* 1791 and grandfather of Charles Darwin 1809-1882, Erasmus Darwin 1731-1802 was a larger-than-life enlightenment natural philosopher, scientist, and writer who practised as a doctor across the English Midlands for nearly half a century. A practical gardener and horticulturist, Darwin created a botanic garden near Lichfield which galvanised his poetry and kept other gardens, an orchard, and small farm in Derby. Informed by his medical practice and botanical studies, Darwin saw many parallels between animals, plants, and humans which aroused hostility during the years of revolution, warfare, and reaction but helped him to write *Zoonomia* 1794-96 and *Phytologia* 1800, his major studies of medicine, agriculture, and gardening. Captivated by the changing landscapes and environments of town and country and supported by social networks such as those in Lichfield and Derby, Darwin avidly exchanged ideas about plants, animals, and their diseases with family, patients, friends such as the poet Anna Seward 1742-1809, farmers, fellow doctors, huntsmen, and even the local mole catcher. This is the first full study of Erasmus Darwin's gardening, horticulture, and agriculture. It shows him as keen a nature enthusiast as his contemporary Rev Gilbert White of Selbourne 1720-1793 or his grandson Charles, fascinated with everything from swarming insects and warring bees to domestic birds and dogs, pigs and livestock on his farm, to fungi growing from horse dung in Derby tan yards. Ranging over his observations of plant physiology and anatomy to the use of plant bandages in his orchard and electrical machines to hasten seed germination, to explosive studies of vegetable brains, nerves, and sensations, the book

demonstrates the ways in which Erasmus Darwin's landscape and garden experiences transformed his understanding of nature. They provided him with insights into medicine and the environmental causes of diseases, the classification of plants and animals, chemistry, evolution, potential new medicines and foodstuffs, and the ecological interdependency of the natural economy. Like the amorous vegetables of the Loves of the Plants (1789), which fascinated, scandalised, and titillated late Georgian society, the many living creatures of Darwin's gardens and farm encountered in this book were for him real, dynamic, interacting and evolving beings who helped inspire and reaffirm his progressive social and political outlook.
