Davis,2013-01-01 Geared toward advanced undergraduates or graduate students of chemical engineering studying applied mathematics this text introduces the quantitative treatment of differential equations arising from modeling physical phenomena in chemical engineering Coverage includes topics such as ODE IVPs placing emphasis on numerical methods and modeling implemented in commercial mathematical software available in 1985 **Computational Chemistry** Anthony Charles Norris,1981 Numerical Methods for Chemical Engineering Kenneth J. Beers,2006-10-30 Suitable for a first year graduate course this textbook unites the applications of numerical mathematics and scientific computing to the practice of chemical engineering Written in a pedagogic style the book describes basic linear and nonlinear algebric systems all the way through to stochastic methods Bayesian statistics and parameter estimation These subjects are developed at a level of mathematics suitable for graduate engineering study without the exhaustive level of the theoretical mathematical detail The implementation of numerical methods in MATLAB is integrated within each chapter and numerous examples in chemical engineering are provided with a library of corresponding MATLAB programs This book will provide the graduate student with essential tools required by industry and research alike Supplementary material includes solutions to homework problems set in the text MATLAB programs and tutorial lecture slides and complicated derivations for the more advanced reader These are available online at www cambridge org 9780521859714 **Numerical Methods in Chemistry** Kenneth Jeffrey Johnson,1972 **Tensor Numerical Methods in Quantum Chemistry** Venera Khoromskaia,Boris N. Khoromskij,2018-06-11 The conventional numerical methods when applied to multidimensional problems suffer from the so called curse of dimensionality that cannot be eliminated by using parallel architectures and high performance computing The novel tensor numerical methods are based on a smart rank structured tensor representation of

the multivariate functions and operators discretized on Cartesian grids thus reducing solution of the multidimensional integral differential equations to 1D calculations We explain basic tensor formats and algorithms and show how the orthogonal Tucker tensor decomposition originating from chemometrics made a revolution in numerical analysis relying on rigorous results from approximation theory Benefits of tensor approach are demonstrated in ab initio electronic structure calculations Computation of the 3D convolution integrals for functions with multiple singularities is replaced by a sequence of 1D operations thus enabling accurate MATLAB calculations on a laptop using 3D uniform tensor grids of the size up to 1015 Fast tensor based Hartree Fock solver incorporating the grid based low rank factorization of the two electron integrals serves as a prerequisite for economical calculation of the excitation energies of molecules Tensor approach suggests efficient grid based numerical treatment of the long range electrostatic potentials on large 3D finite lattices with defects The novel range separated tensor format applies to interaction potentials of multi particle systems of general type opening the new prospects for tensor methods in scientific computing This research monograph presenting the modern tensor techniques applied to problems in quantum chemistry may be interesting for a wide audience of students and scientists working in computational chemistry material science and scientific computing   Numerical Methods for Chemical Engineers with MATLAB Applications A. Constantinides,Navid Mostoufi,1999 Master numerical methods using MATLAB today s leading software for problem solving This complete guide to numerical methods in chemical engineering is the first to take full advantage of MATLAB s powerful calculation environment Every chapter contains several examples using general MATLAB functions that implement the method and can also be applied to many other problems in the same category The authors begin by introducing the solution of nonlinear equations using several standard approaches including methods of successive substitution and linear interpolation the Wegstein method the Newton Raphson method the Eigenvalue method and synthetic division algorithms With these fundamentals in hand they move on to simultaneous linear algebraic equations covering matrix and vector operations Cramer s rule Gauss methods the Jacobi method and the characteristic value problem Additional coverage includes Finite difference methods and interpolation of equally and unequally spaced points Numerical differentiation and integration including differentiation by backward forward and central finite differences Newton Cotes formulas and the Gauss Quadrature Two detailed chapters on ordinary and partial differential equations Linear and nonlinear regression analyses including least squares estimated vector of parameters method of steepest descent Gauss Newton method Marquardt Method Newton Method and multiple nonlinear regression The numerical methods covered here represent virtually all of those commonly used by practicing chemical engineers The focus on MATLAB enables readers to accomplish more with less complexity than was possible with traditional FORTRAN For those unfamiliar with MATLAB a brief introduction is provided as an Appendix Over 60 MATLAB examples methods and function scripts are covered and all of them are included on the book s CD   **Numerical Methods for Chemical Engineers Using Excel, VBA, and MATLAB** Victor
