Property-preserving Numerical Schemes For Conservation Laws Dmitri Kuzmin,Hennes Hajduk,2023-08-28 High order numerical methods for hyperbolic conservation laws do not guarantee the validity of constraints that physically meaningful approximations are supposed to satisfy The finite volume and finite element schemes summarized in this book use limiting techniques to enforce discrete maximum principles and entropy inequalities Spurious oscillations are prevented using artificial viscosity operators and or essentially nonoscillatory reconstructions An introduction to classical nonlinear stabilization approaches is given in the simple context of one dimensional finite volume discretizations Subsequent chapters of Part I are focused on recent extensions to continuous and discontinuous Galerkin methods Many of the algorithms presented in these chapters were developed by the authors and their collaborators Part II gives a deeper insight into the mathematical theory of property preserving numerical schemes It begins with a review of the convergence theory for finite volume methods and ends with analysis of algebraic flux correction schemes for finite elements In addition to providing ready to use algorithms this text explains the design principles behind such algorithms and shows how to put theory into practice Although the book is based on lecture notes written for an advanced graduate level course it is also aimed at senior researchers who develop and analyze numerical methods for hyperbolic problems *Numerical Schemes for Conservation Laws* Dietmar Kröner,1997-03-06 This book systematically studies upwind methods for initial value problems for scalar conservation laws in one and multidimensions The mathematical theory of convergence theory and of a priori error estimates is presented in detail for structure finite difference methods as well as for unstructured grids finite volume methods Higher order schemes are also included In the second part of the book the algorithms for scalar equations are generalized into systems of conversation laws in one and multidimensions The most powerful schemes for the discretization of systems are described and numerical examples are presented In particular local grid refinement has been taken into account The initial boundary value problem is also considered for linear systems and nonlinear scalar conservation laws
