Numerical Modelling of Material Deformation Processes Peter Hartley, Ian Pillinger, Clive E.N. Sturgess, 2012-12-06
The principal aim of this text is to encourage the development and application of numerical modelling techniques as an aid to achieving greater efficiency and optimization of metal forming processes The contents of this book have therefore been carefully planned to provide both an introduction to the fundamental theory of material deformation simulation and also a comprehensive survey of the state of the art of deformation modelling techniques and their application to specific and industrially relevant processes To this end leading international figures in the field of material deformation research have been invited to contribute chapters on subjects on which they are acknowledged experts The information in this book has been arranged in four parts Part I deals with plasticity theory Part II with various numerical modelling techniques Part III with specific process applications and material phenomena and Part IV with integrated computer systems The objective of Part I is to establish the underlying theory of material deformation on which the following chapters can build It begins with a chapter which reviews the basic theories of classical plasticity and describes their analytical representations The second chapter moves on to look at the theory of deforming materials and shows how these expressions may be used in numerical techniques The last two chapters of Part I provide a review of isotropic plasticity and anisotropic plasticity

Computational Plasticity in Powder Forming Processes Amir Khoei, 2010-07-07 The powder forming process is an extremely effective method of manufacturing structural metal components with high dimensional accuracy on a mass production basis The process is applicable to nearly all industry sectors It offers competitive engineering solutions in terms of technical performance and manufacturing costs For these reasons powder metallurgy is developing faster than other metal forming technology Computational Plasticity in Powder Forming Processes takes a specific look at the application of computer aided engineering in modern powder forming technologies with particular attention given to the Finite Element Method FEM FEM analysis provides detailed information on conditions within the processed material which is often more complete than can be obtained even from elaborate physical experiments and the numerical simulation makes it possible to examine a range of designs or operating conditions economically Describes the mechanical behavior of powder materials using classical and modern constitutive theories Devoted to the application of adaptive FEM strategy in the analysis of powder forming processes 2D and 3D numerical modeling of powder forming processes are presented using advanced plasticity models
