## **Nutrient Acquisition By Plants An Ecological Perspective:**

*Nutrient Acquisition by Plants* Hormoz BassiriRad, 2005-05-20 This is an integrated review of the mechanisms controlling plant nutrient uptake and how plants respond to changes in the environment Among key topics covered are soil nutrient bioavailability root responses to variations in nutrient supply nitrogen fixation root architecture life span mycorrhizae responses to climate change The book helps us understand the mechanisms that govern present day plant communities and to predict the response of plants to a changing climate

*Nutrient Acquisition by Plants* Hormoz BassiriRad, 2005-12-30 Adaptation and evolution of terrestrial plants depend to a large extent on their ability to acquire nutrients This is a modern and integrative treatment of the mechanisms controlling plant nutrient uptake and how plants respond to changes in the environment The following key topics are covered soil nutrient bioavailability root responses to variations in nutrient supply nitrogen fixation regulation of nutrient uptake by internal plant demand root characteristics kinetics of nutrient uptake root architecture life span mycorrhizae responses to climate change This integrated view helps us to understand the mechanisms that govern present day plant communities and is indispensable in models designed to predict the response of plants to a changing climate

**Human Ecology** Holger Schutkowski, 2006-02-28 This book explores the relationship between cultural strategies and their biological outcomes combining for the first time an ecosystems approach with cultural anthropological archaeological and evolutionary behavioural concepts Beginning with resource use and food procurement behaviour the text examines major subsistence modes the circumstances and dynamics of large scale subsistence change the effect of social differentiation on resource use and the effects of subsistence behaviour on population development and regulation

**Growth Dynamics of Conifer Tree Rings** Eugene A. Vaganov, Malcolm K. Hughes, Alexander V. Shashkin, 2006-03-12 Each tree ring contains an image of the time when the ring formed projected onto the ring's size structure and composition Tree rings thus are natural archives of past environments and contain records of past climate While dendrochronologists have investigated the impact of climate on tree ring growth by empirical statistical methods this volume presents a process based model complementing previous approaches Basic ideas concerning the biology of tree ring growth and its control by environmental factors are treated especially for conifers The use of the model is illustrated by means of several examples from widely differing environments and possible future directions for model development and application are discussed The volume provides an improved mechanistic basis for the interpretation of tree rings as records of past climate It advances process understanding of the large scale environmental control of wood growth As forests are the main carbon sink on land the results are of great importance for all global change studies

**A Biogeoscience Approach to Ecosystems** Edward A. Johnson, Yvonne E. Martin, 2016-10-13 Integrates geoscience and ecology focusing on connections in ecological geospheric hydrospheric and atmospheric processes in ecosystems

ecosystems Reconstructing the ecological history of coral reefs the authors evaluate whether recent dramatic changes are novel events or part of a long term trend or cycle The text combines principles of geophysics paleontology and marine sciences with real time observation examining the interacting causes of change hurricane damage predators disease rising sea level nutrient loading global warming and ocean acidification Predictions about the future of coral reefs inspire strategies for restoration and management of ecosystems Useful for students and professionals in ecology and marine biology including environmental managers

*Ecology of Harmful Algae* E. Granéli,Jefferson T. Turner,2007-10-04 Harmful algal can cause a variety of deleterious effects including the poisoning of fish and shellfish habitat disruptions for many organisms water discoloration beach fouling and even toxic effects for humans In this volume international experts provide an in depth analysis of harmful algae topics and offer a comprehensive synthesis of the latest research in the field

The Ecology of Browsing and Grazing Iain J. Gordon,Herbert H.T. Prins,2007-09-14 Extensive grazing and browsing by domestic and wild herbivores shape the vegetation composition structure and dynamics of many terrestrial ecosystems This volume investigates how large herbivores not only influence the structure and distribution of the vegetation but also affect nutrient flows and the responses of associated fauna The mechanisms and processes underlying the herbivores behaviour distribution movement and direct impact on the vegetation and the dynamics of nutrients plant species and vegetation composition in terrestrial ecosystems are discussed in detail It is shown that an understanding of plant animal interactions can provide practical advice on the management of large herbivores to integrate production and conservation in terrestrial systems particularly in the face of environmental and climate change

*Coastal Dunes* M. L. Martínez,Norbert P. Psuty,2007-09-14 Coastal dunes occur in almost every latitude from tropical to polar and have been substantially altered by human activities Many are already severely and irreversibly degraded Although these ecosystems have been studied for a long time as early as 1835 there has been a strong emphasis on the mid latitude dune systems and a lack of attention given to the tropics where unfortunately much of the modern exploitation and coastal development for tourism is occurring This book brings together coastal dune specialists from tropical and temperate latitudes which together cover a wide set of topics including geomorphology community dynamics ecophysiology biotic interactions and environmental problems and conservation A major product of this book is a set of recommendations for future research identifying relevant topics where detailed knowledge is still lacking It also identifies management tools that will promote and maintain the rich diversity of the dune environments in the context of continuing coastal development

#### The Ecophysiology of Plant-Phosphorus

Interactions Philip J. White, John P. Hammond, 2008-06-03 Phosphorus P is an essential macronutrient for plant growth. It is as phosphate that plants take up P from the soil solution. Since little phosphate is available to plants in most soils, plants have evolved a range of mechanisms to acquire and use P efficiently, including the development of symbiotic relationships that help them access sources of phosphorus beyond the plant's own range. At the same time, in agricultural systems, applications of inorganic phosphate fertilizers aimed at overcoming phosphate limitation are unsustainable and can cause pollution. This latest volume in Springer's Plant Ecophysiology series takes an in-depth look at these diverse plant phosphorus interactions in natural and agricultural environments, presenting a series of critical reviews on the current status of research. In particular, the book presents a wealth of information on the genetic and phenotypic variation in natural plant ecosystems adapted to low P availability, which could be of particular relevance to developing new crop varieties with enhanced abilities to grow under P-limiting conditions. The book provides a valuable reference material for graduates and research scientists working in the field of plant phosphorus interactions, as well as for those working in plant breeding and sustainable agricultural development.

#### Management of Microbial Resources in the Environment Abdul Malik, Elisabeth Grohmann, Madalena Alves, 2013-02-26

This volume details the exploration, collection, characterization, evaluation, and conservation of microbes for sustainable utilization in the development of the global as well as national economies, e.g., in agriculture, ecosystems, environments, industry, and medicine. Many research institutes and universities all over the world carry out microbiological and biotechnological research, which generates substantial genomic resources, such as cDNA libraries, gene constructs, promoter regions, transgenes, and more valuable assets for gene discovery and transgenic product development. This work provides up-to-date information on the management of microbial resources in the environment. It also covers the ecology of microorganisms in natural and engineered environments. In trying to understand microbial interactions, it further focuses on genomic, metagenomic, and molecular advances, as well as on microbial diversity and phylogeny, ecological studies of human, animal, and plant microbiology, and disease, microbial processes and interactions in the environment, and key technological advances. Though not intended to serve as an encyclopedic review of the subject, the various chapters investigate both theoretical and practical aspects and provide essential basic information for future research to support continued development.
