Clinical Aspects of Functional Foods and Nutraceuticals Dilip Ghosh, Debasis Bagchi, Tetsuya Konishi, 2014-08-29 In the last three decades revolutionary achievements have taken place in nutraceutical and functional food research including the introduction of a number of cutting edge dietary supplements supported by human clinical trials and strong patents Novel manufacturing technologies including unique extraction processes bioavailability improvements through delivery technologies such as

nanotechnology and innovative packaging have been critical steps for their successful positioning in the marketplace and consumer acceptance worldwide. Nonetheless, mixed messages have emerged from both the scientific community and the media concerning the potential benefits of foods and nutrients in the treatment and prevention of disease. This confusion, in addition to existing marketed products making questionable health claims, has led health practitioners and consumers to become skeptical about nutritional claims of new and emerging food products.

Clinical Aspects of Functional Foods and Nutraceuticals provides an extensive overview of the clinical aspects of functional foods and nutraceuticals. It contains information on both nutritional challenges and potential health benefits of functional foods and nutraceuticals. In addition to exploring the underpinning science, the book also focuses on food innovation, functional foods in human health, food drug interactions, functional foods in medicine, the seed to clinic approach, global regulatory frameworks, challenges and future directions. The book provides an essential overview of the clinical aspects surrounding functional foods and nutraceuticals for key stakeholders, drawing links between areas of knowledge that are often isolated from each other. This form of knowledge integration will be essential for practice, especially for policy makers and administrators.

The Mediterranean Diet
 Antonia-Leda Matalas, Antonis Zampelas, Vassilis Stavrinos, 2001-01-23
 Adults living in certain olive growing areas of the Mediterranean Basin display high life expectancies and rates of chronic disease that are among the lowest in the world. These benefits are achieved despite socioeconomic indicators that are often much lower than those of more industrial nations in North America and Europe. Attention has focused on
