**Selected Water Resources Abstracts**, 1989      **Cities and Their Vital Systems** Advisory Committee on Technology and Society, 1989. *Cities and Their Vital Systems* asks basic questions about the longevity, utility, and nature of urban infrastructures; analyzes how they grow, interact, and change; and asks how, when, and at what cost they should be replaced. Among the topics discussed are problems arising from increasing air travel and airport congestion; the adequacy of water supplies and waste treatment; the impact of new technologies on construction; urban real estate values; and the field of telematics, the combination of computers and telecommunications that makes money machines and national newspapers possible.

**Use of Services for Family Planning and Infertility, United States, 1982** Gerry E. Hendershot, Marjorie C. Horn, William D. Mosher, 1988. The 1982 statistics on the use of family planning and infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth (NSFG) conducted by the National Center for Health Statistics. Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%), or Hispanic (77%) wives or between the 2 income groups. The 1982 survey questions were more comprehensive than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 1077 visits/1000 women. Teenagers had the highest annual visit rate (1581/1000) of any age

group for all sources of family planning services combined Visit rates declined sharply with age from 1447 at ages 15 24 to 479 at ages 35 44 Similar declines with age also were found in the visit rates for white and black women separately Nevertheless the annual visit rate for black women 1334 1000 was significantly higher than that for white women 1033 The highest overall visit rate was for black women 15 19 years of age 1867 1000 Nearly 2 3 of all family planning visits were to private medical sources Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources as did black women age 15 24 White women age 20 and older had higher visit rates to private medical services than to clinics Never married women had higher visit rates to clinics than currently or formerly married women Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview During the 3 years before interview about 1 9 million women had infertility visits For all ever married women as well as for white and black women separately infertility services were more likely to be secured from private medical sources than from clinics The survey design reliability of the estimates and the terms used are explained in the technical notes Index of Conference Proceedings ,1989 *Government Reports Announcements & Index* ,1988 **EPA Publications Bibliography** ,1995 Agrindex ,1992 **Government Reports Announcements & Index** ,1988 **Scientific and Technical Aerospace Reports** ,1988 Selected Water Resources Abstracts ,1989 *Business & Economics* ,1988 Management, a Bibliography for NASA Managers ,1989 **Government Reports Annual Index** ,1986 **HRIS Abstracts** ,1988 **Information Resources Management** NASA Scientific and Technical Information Facility,1990
