P-adic Deterministic And Random Dynamics:

P-adic Deterministic and Random Dynamics Andrei Y. Khrennikov, Marcus Nilsson, 2013-03-14 This book provides an overview of the theory of p -adic and more general non Archimedean dynamical systems The main part of the book is devoted to discrete dynamical systems It presents a model of probabilistic thinking on p -adic mental space based on ultrametric diffusion Coverage also details p -adic neural networks and their applications to cognitive sciences learning algorithms memory recalling

The Arithmetic of Dynamical Systems J.H. Silverman, 2010-05-05 This book is designed to provide a path for the reader into an amalgamation of two venerable areas of mathematics Dynamical Systems and Number Theory Many of the motivating theorems and conjectures in the new subject of Arithmetic Dynamics may be viewed as the transposition of classical results in the theory of Diophantine equations to the setting of discrete dynamical systems especially to the iteration theory of maps on the projective line and other algebraic varieties Although there is no precise dictionary connecting the two areas the reader will gain a flavor of the correspondence from the following associations Diophantine Equations Dynamical Systems rational and integral rational and integral points on varieties points in orbits torsion points on periodic and preperiodic abelian varieties points of rational maps There are a variety of topics covered in this volume but inevitably the choice reflects the author's tastes and interests Many related areas that also fall under the heading of arithmetic or algebraic dynamics have been omitted in order to keep the book to a manageable length A brief list of some of these omitted topics may be found in the introduction Online Resources The reader will find additional material references and errata at <http://www.math.brown.edu/~jhs/ADSHome.html> Acknowledgments The author has consulted a great many sources in writing this book Every attempt has been made to give proper attribution for all but the most standard results

Cyber Security, Cryptology, and Machine Learning Shlomi

Dolev, Michael Elhadad, Mirosław Kutylowski, Giuseppe Persiano, 2024-12-17 This book constitutes the proceedings of the 8th International Symposium on Cyber Security Cryptology and Machine Learning CSCML 2024 held in Be'er Sheva Israel during December 19-20, 2024. The 16 full papers and 11 short papers presented here were carefully reviewed and selected from 43 submissions. These papers focus on the current innovative research developments in the field of cyber security, cryptography, and machine learning systems and networks. **Advances in p -adic and Non-Archimedean Analysis** M. Berz, Khodr Shamseddine, 2010-02-17 This volume contains the proceedings of the Tenth International Conference on p -adic and Non-Archimedean Analysis held at Michigan State University in East Lansing, Michigan, on June 30-July 3, 2008. This volume contains a kaleidoscope of papers based on several of the more important talks presented at the meeting. It provides a cutting edge connection to some of the most important recent developments in the field. Through a combination of survey papers, research articles, and extensive references to earlier work, this volume allows the reader to quickly gain an overview of current activity in the field and become acquainted with many of the recent sub-branches of its development. **Nonlinear Maps and their Applications** Clara Grácio, Daniele Fournier-Prunaret, Tetsushi Ueta, Yoshifumi Nishio, 2014-02-18 In the field of Dynamical Systems, nonlinear iterative processes play an important role. Nonlinear mappings can be found as immediate models for many systems from different scientific areas such as engineering, economics, biology, or can also be obtained via numerical methods permitting to solve non-linear differential equations. In both cases, the understanding of specific dynamical behaviors and phenomena is of the greatest interest for scientists. This volume contains papers that were presented at the International Workshop on Nonlinear Maps and their Applications NOMA 2011 held in Évora, Portugal, on September 15-16, 2011. This kind of collaborative effort is of paramount importance in promoting communication among the various groups that work in dynamical systems and networks in their research, theoretical studies, as well as for applications. This volume is suitable for graduate students as well as researchers in the field. **Quantum Potential Theory** Philippe Biane, Luc Bouten, Fabio Cipriani, Norio Konno, Quanhua Xu, 2008-10-16 This book offers the revised and completed notes of lectures given at the 2007 conference Quantum Potential Theory: Structures and Applications to Physics. These lectures provide an introduction to the theory and discuss various applications. *Invitation to Ergodic Theory* César Ernesto Silva, 2008 Several examples of a dynamical system are developed in detail to illustrate various dynamical concepts. These include, in particular, the Baker's transformation, irrational rotations, the dyadic odometer, the Hajian-Kakutani transformation, the Gauss transformation, and the Chacon transformation. There is a detailed discussion of cutting and stacking transformations in ergodic theory. The book includes several exercises and some open questions to give the flavor of current research. The book also introduces some notions from topological dynamics such as minimality, transitivity, and symbolic spaces, and develops some metric topology, including the Baire category theorem. **BOOK JACKET**
