The Really Hard Problem Owen Flanagan, 2009-02-13 A noted philosopher proposes a naturalistic rather than supernaturalistic way to solve the really hard problem how to live in a meaningful way how to live a life that really matters even as a finite material being living in a material world If consciousness is the hard problem in mind science explaining how the amazing private world of consciousness emerges from neuronal activity then the really hard problem writes Owen Flanagan in this provocative book is explaining how meaning is possible in the material world How can we make sense of the magic and mystery of life naturalistically without an appeal to the supernatural How do we say truthful and enchanting things about being human if we accept the fact that we are finite material beings living in a material world or in Flanagan s description short lived pieces of organized cells and tissue Flanagan s answer is both naturalistic and enchanting We all wish to live in a meaningful way to live a life that really matters to flourish to achieve eudaimonia to be a happy spirit Flanagan calls his empirical normative inquiry into the nature causes and conditions of human flourishing eudaimonics Eudaimonics systematic philosophical investigation that is continuous with science is the naturalist s response to those who say that science has robbed the world of the meaning that fantastical wishful stories once provided Flanagan draws on philosophy neuroscience evolutionary biology and psychology as well as on transformative mindfulness and self cultivation practices that come from such nontheistic spiritual traditions as Buddhism Confucianism Aristotelianism and Stoicism in his quest He gathers from these disciplines knowledge that will help us understand the nature causes and constituents of well being and advance human flourishing Eudaimonics can help us find out how to make a difference how to contribute to the accumulation of good effects how to live a meaningful life

Classical Potential Theory and Its Probabilistic Counterpart J. L. Doob, 2012-12-06 Potential theory and certain aspects of probability theory are intimately related perhaps most obviously in that the transition function determining a Markov process can be used to define the Green function of a potential theory Thus it is possible to define and develop many potential theoretic concepts probabilistically a procedure potential theorists observe with jaundiced eyes in view of the fact that now as in the past their subject provides the motivation for much of Markov process theory However that may be it is clear that certain concepts in potential theory correspond closely to concepts in probability theory specifically to concepts in martingale theory For example superharmonic functions correspond to supermartingales More specifically the Fatou type boundary limit theorems in potential theory correspond to supermartingale convergence theorems the limit properties of monotone sequences of superharmonic functions correspond surprisingly closely to limit properties of monotone sequences of super martingales certain positive superharmonic functions

supermartingales are called potentials have associated measures in their respective theories and are subject to domination principles inequalities involving the supports of those measures in each theory there is a reduction operation whose properties are the same in the two theories and these reductions induce sweeping balayage of the measures associated with potentials and so on

Smith and his long time co author Bart J Wilson bring their study of economics full circle by returning to the founder of modern economics Adam Smith Sometime in the last 250 years economists lost sight of the full range of human feeling thinking and knowing in everyday life Smith and Wilson show how Adam Smith s model of sociality can re humanize twenty first century economics by undergirding it with sentiments fellow feeling and a sense of propriety the stuff of which human
