Pyramidal Neural Networks:

Pyramidal Neural Networks Horst Bischof, 1995 A large amount of information about the world we live in is supplied by our visual systems Humans perform the task of vision effortlessly without being aware of this complex process Hierarchical structures permit successful examination of such intricate operations This book investigates hierarchical structured neural networks for vision and image processing tasks and proposes various new neural network models for that purpose It exploits the capabilities of hierarchical neural networks in a systematic way by considering the similarities to hierarchical structures already in use by computer vision researchers All issues of hierarchical neural networks are treated in considerable detail that is the structure of the network the representation issue and learning mechanisms are analyzed theoretically as well as experimentally Considering the similarity between conventional vision algorithms and hierarchical neural networks not only allows a transfer of knowledge between these two fields but also gives voice to many new algorithms *Neural Networks and Psychopathology* Dan J. Stein, Jacques Ludik, 1998-12-03 Research on connectionist models is one of the most exciting areas in cognitive science and neural network models of psychopathology have immediate theoretical and empirical appeal The contributors to this study review theoretical historical and clinical issues including the contribution of neural network models to diagnosis pharmacotherapy and psychotherapy Models are presented for a range of disorders including schizophrenia obsessive compulsive disorder dissociative phenomena autism and Alzheimer's disease This book will appeal to a broad audience On the one hand it will be read with interest by psychiatrists psychologists and other clinicians and researchers in psychopathology On the other it will appeal to those working in cognitive science and artificial intelligence and particularly those interested in neural network or connectionist models *Neural Information Processing* Irwin King, 2006-09-26 The three volume set LNCS 4232 LNCS 4233 and LNCS 4234 constitutes the refereed proceedings of the 13th International Conference on Neural Information Processing ICONIP 2006 held in Hong Kong China in October 2006 The 386 revised full papers presented were carefully reviewed and selected from 1175 submissions *Advances in Neural Networks* Simone Bassi, Anna Esposito, Francesco Carlo Morabito, Eros Pasero, 2016-06-18 This carefully edited book is putting emphasis on computational and artificial intelligent methods for learning and their relative applications in robotics embedded systems and ICT interfaces for psychological and neurological diseases The book is a follow up of the scientific workshop on Neural Networks WIRN 2015 held in Vietri sul Mare Italy from the 20th to the 22nd of May 2015 The workshop at its 27th edition became a traditional scientific event that brought together scientists from many countries and several scientific disciplines Each chapter is an extended version of the original contribution presented at the workshop and together with the reviewers peer revisions it also benefits from the live discussion during the presentation The content of book is organized in the following sections 1 Introduction 2 Machine Learning 3 Artificial Neural Networks Algorithms and models 4 Intelligent Cyberphysical and Embedded System 5 Computational Intelligence Methods for Biomedical ICT in Neurological

Anatomy and Plasticity in Large-Scale Brain Models Markus Butz, Wolfram Schenck, Arjen van Ooyen, 2017-01-05

Supercomputing facilities are becoming increasingly available for simulating activity dynamics in large scale neuronal networks On today s most advanced supercomputers networks with up to a billion of neurons can be readily simulated However building biologically realistic full scale brain models requires more than just a huge number of neurons In addition to network size the detailed local and global anatomy of neuronal connections is of crucial importance Moreover anatomical connectivity is not fixed but can rewire throughout life structural plasticity an aspect that is missing in most current network models in which plasticity is confined to changes in synaptic strength synaptic plasticity The papers in this Ebook which may broadly be divided into three themes aim to bring together high performance computing with recent experimental and computational research in neuroanatomy In the first theme fiber connectivity new methods are described for measuring and data basing microscopic and macroscopic connectivity In the second theme structural plasticity novel models are introduced that incorporate morphological plasticity and rewiring of anatomical connections In the third theme large scale simulations simulations of large scale neuronal networks are presented with an emphasis on anatomical detail and plasticity mechanisms Together the articles in this Ebook make the reader aware of the methods and models by which large scale brain networks running on supercomputers can be extended to include anatomical detail and plasticity
