Hermitian Form

A Hermitian form on a vector space V over the complex field $\mathbb{C}$ is a function $f : V \times V \to \mathbb{C}$ such that for all u, v, $w \in V$ and all a, $b \in \mathbb{R}$,

1. $f(a u + b v, w) = a f(u, w) + b f(v, w)$.

2. $f(u, v) = \overline{f(v, u)}$.

Here, the bar indicates the complex conjugate. It follows that

$$f(u, a v + b w) = \overline{a} f(u, v) + \overline{b} f(u, w), \tag{1}$$

which can be expressed by saying that f is antilinear on the second coordinate. Moreover, for all $v \in V$, $f(v, v) = \overline{f(v, v)}$, which means that $f(v, v) \in \mathbb{R}$.

An example is the dot product of $\mathbb{C}^n$, defined as

$$(u_1, \ldots, u_n) \cdot (v_1, \ldots, v_n) = \sum_{i=1}^{n} u_i \overline{v_j}. \tag{2}$$

Quadratic Hermitian Forms:

Quadratic and Hermitian Forms W. Scharlau,2012-12-06 For a long time at least from Fermat to Minkowski the theory of quadratic forms was a part of number theory Much of the best work of the great number theorists of the eighteenth and nineteenth century was concerned with problems about quadratic forms On the basis of their work Minkowski Siegel Hasse Eichler and many others crea ted the impressive arithmetic theory of quadratic forms which has been the object of the well known books by Bachmann 1898 1923 Eichler 1952 and O Meara 1963 Parallel to this development the ideas of abstract algebra and abstract linear algebra introduced by Dedekind Frobenius E Noether and Artin led to today s structural mathematics with its emphasis on classification problems and general structure theorems On the basis of both the number theory of quadratic forms and the ideas of modern algebra Witt opened in 1937 a new chapter in the theory of quadratic forms His most fruitful idea was to consider not single individual quadratic forms but rather the entity of all forms over a fixed ground field and to construct from this an algebra ic object This object the Witt ring then became the principal object of the entire theory Thirty years later Pfister demonstrated the significance of this approach by his celebrated structure theorems   Quadratic and Hermitian Forms over Rings Max-Albert Knus,2012-12-06 From its birth in Babylon till 1936 the theory of quadratic forms dealt almost exclusively with forms over the real field the complex field or the ring of integers Only as late as 1937 were the foundations of a theory over an arbitrary field laid This was in a famous paper by Ernst Witt Still too early apparently because it took another 25 years for the ideas of Witt to be pursued notably by Albrecht Pfister and expanded into a full branch of algebra Around 1960 the development of algebraic topology and algebraic K theory led to the study of quadratic forms over commutative rings and hermitian forms over rings with involutions Not surprisingly in this more general setting algebraic K theory plays the role that linear algebra plays in the case of fields This book exposes the theory of quadratic and hermitian forms over rings in a very general setting It avoids as far as possible any restriction on the characteristic and takes full advantage of the functorial aspects of the theory The advantage of doing so is not only aesthetical on the one hand some classical proofs gain in simplicity and transparency the most notable examples being the results on low dimensional spinor groups on the other hand new results are obtained which went unnoticed even for fields as in the case of involutions on 16 dimensional central simple algebras The first chapter gives an introduction to the basic definitions and properties of hermitian forms which are used throughout the book   **Quadratic and Hermitian Forms** McMaster University,1984 Contains the proceedings of the 1983 Seminar on Quadratic and Hermitian Forms held at McMaster University July 1983 Between 1945 and 1965 most of the work in quadratic and hermitian forms took place in arithmetic theory M Eichler M Kneser O T O Meara   *Quadratic and Hermitian Forms* Winfried Scharlau,1985

Advances on Superelliptic Curves and Their Applications Lubjana Beshaj,Eustrat Zhupa,2015-07-15 This book had its origins in the NATO Advanced Study Institute ASI held in Ohrid Macedonia in 2014 The focus of this ASI was the arithmetic

of superelliptic curves and their application in different scientific areas including whether all the applications of hyperelliptic curves such as cryptography mathematical physics quantum computation and diophantine geometry can be carried over to the superelliptic curves Additional papers have been added which provide some background for readers who were not at the conference with the intention of making the book logically more complete and easier to read but familiarity with the basic facts of algebraic geometry commutative algebra and number theory are assumed The book is divided into three sections The first part deals with superelliptic curves with regard to complex numbers the automorphisms group and the corresponding Hurwitz loci The second part of the book focuses on the arithmetic of the subject while the third addresses some of the applications of superelliptic curves **Quadratic and Hermitian Forms** Winfried Scharlau (mathématicien).), **An Introduction to Linear Algebra** L. Gupta,2006-07 **From Algebraic Structures to Tensors** Gérard Favier,2020-01-02 Nowadays tensors play a central role for the representation mining analysis and fusion of multidimensional multimodal and heterogeneous big data in numerous fields This set on Matrices and Tensors in Signal Processing aims at giving a self contained and comprehensive presentation of various concepts and methods starting from fundamental algebraic structures to advanced tensor based applications including recently developed tensor models and efficient algorithms for dimensionality reduction and parameter estimation

Although its title suggests an orientation towards signal processing the results presented in this set will also be of use to readers interested in other disciplines This first book provides an introduction to matrices and tensors of higher order based on the structures of vector space and tensor space Some standard algebraic structures are first described with a focus on the hilbertian approach for signal representation and function approximation based on Fourier series and orthogonal polynomial series Matrices and hypermatrices associated with linear bilinear and multilinear maps are more particularly studied Some basic results are presented for block matrices The notions of decomposition rank eigenvalue singular value and unfolding of a tensor are introduced by emphasizing similarities and differences between matrices and tensors of higher order __Matrix and Tensor Decompositions in Signal Processing, Volume 2__ Gérard Favier,2021-08-31 The second volume will deal with a presentation of the main matrix and tensor decompositions and their properties of uniqueness as well as very useful tensor networks for the analysis of massive data Parametric estimation algorithms will be presented for the identification of the main tensor decompositions After a brief historical review of the compressed sampling methods an overview of the main methods of retrieving matrices and tensors with missing data will be performed under the low rank hypothesis Illustrative examples will be provided *Equivalence and Classification of Quadratic and Hermitian Forms* Mary Hester Cooper,1927

__Abstract and Linear Algebra__ , **Groups Acting on Hyperbolic Space** Juergen Elstrodt,Fritz Grunewald,Jens Mennicke,2013-03-09 This book is concerned with discontinuous groups of motions of the unique connected and simply

connected Riemannian 3 manifold of constant curva ture 1 which is traditionally called hyperbolic 3 space This space is the 3 dimensional instance of an analogous Riemannian manifold which exists uniquely in every dimension n 2 The hyperbolic spaces appeared first in the work of Lobachevski in the first half of the 19th century Very early in the last century the group of isometries of these spaces was studied by Steiner when he looked at the group generated by the inversions in spheres The ge ometries underlying the hyperbolic spaces were of fundamental importance since Lobachevski Bolyai and Gau had observed that they do not satisfy the axiom of parallels Already in the classical works several concrete coordinate models of hy perbolic 3 space have appeared They make explicit computations possible and also give identifications of the full group of motions or isometries withwell known matrix groups One such model due to H Poincare is the upper 3 half space IH in JR The group of isometries is then identified with an exten sion of index 2 of the group PSL 2   *Linear Algebra* A. Ramachandra Rao,P Bhimasankaram,2000-05-15 The vector space approach to the treatment of linear algebra is useful for geometric intuition leading to transparent proofs it s also useful for generalization to infinite dimensional spaces The Indian School led by Professors C R Rao and S K Mitra successfully employed this approach This book follows their approach and systematically develops the elementary parts of matrix theory exploiting the properties of row and column spaces of matrices Developments in linear algebra have brought into focus several techniques not included in basic texts such as rank factorization generalized inverses and singular value decomposition These techniques are actually simple enough to be taught at the advanced undergraduate level When properly used they provide a better understanding of the topic and give simpler proofs making the subject more accessible to students This book explains these techniques   **Methods of Mathematical Physics, Volume 1** Richard Courant,David Hilbert,2024-11-12 Since the first volume of this work came out in Germany in 1924 this book together with its second volume has remained standard in the field Courant and Hilbert s treatment restores the historically deep connections between physical intuition and mathematical development providing the reader with a unified approach to mathematical physics The present volume represents Richard Courant s second and final revision of 1953
