Advanced Technologies and Methodologies for Risk Management in the Global Transport of Dangerous Goods Chiara Bersani,2008 In the last few years logistics has become a strategic factor for development and competition In fact research and development activities have traditionally faced the management of supply chain and international transport focussing on two main aspects speed and efficiency However several vulnerabilities have recently been highlighted under a safety and security viewpoint The weakness of the logistic chains has become more evident with the beginning of the new millennium Terrorist attacks such as the 11th of September 2001 in the USA have caused the introduction of new rules and procedures which affect the overall logistics showing the vulnerability of the global economy So nowadays it would appear anachronistic to carry out an exhaustive research activity on the supply chain with no relation to the various typologies of risk which may affect it This book aims to effectively represent the current status of research on dangerous goods transport Dangerous Materials: Control, Risk Prevention and Crisis Management Alberto Brugnoli,2010-09-22 ADRIANO DE MAIO IReR President This publication originated from the workshop on Control and risk prevention of dangerous materials and crisis management that took place in Sofia Bulgaria in March 2009 The basic idea is that international scientific cooperation can effectively

contribute to security stability and solidarity among nations through increased collaboration networking and capacity building and supporting democratic growth and economic development in Partner Countries We are all facing new needs and threats deriving from a world changing constantly its social political and economic dimension and for this reason the international dialogue through civil science represents a way forward to comment to global common issues In fact the Lombardy Regional Institute for Research has developed some international activities aiming at establishing networks of scientists and experts in defined areas and subjects Through one of these activities the Institute entered in touch with the Science for Peace and Security Programme In this framework we decided to share the experience of Lombardy Region on transportation of dangerous materials half of their total transport in Italy research and studies in civil area conducted in Lombardy Region are considered the most innovative in Europe for the results obtained Comparison with diverse international experiences is a great opportunity of implementing present results and applying them to different applications from civil to anti terrorism and extending them to countries other than Italy

Transportation for the Nuclear Industry D.G. Walton,S.M. Blackburn,2012-12-06 The transport requirements of the nuclear industry are unique in many respects This is not because cargoes are particularly large or hazardous by comparison with other industries but because standards of performance required in every aspect of the activity are so much greater than those required for any other industry Transport of nuclear materials is subject to existing statutory regulations applied not only nationally but internationally In addition to this users of transport demand the highest standards of performance for their own purposes particularly in the area of quality assurance Similar considerations also apply to the transport of non nuclear materials where the transport link often has to tie in with project management and quality assurance requirements Safety and security of nuclear materials are of paramount importance but even when these aspects are of a completely acceptable standard public attitudes to the transport activities have to be addressed adequately The transport system itself consists of many components The route the vehicles the containers and the individual packages The performance of each component determines the performance of the total system all these factors were presented in the 1988 Conference on Transportation for the Nuclear Industry giving a broad overview of current practice together with wide ranging consideration of future requirements and developments

Applicability of IAEA Safety Standards to Non-Water Cooled Reactors and Small Modular Reactors IAEA,2023-06-12 In response to an increase in global activities related to non water cooled reactors and small modular reactors this new Safety Report documenting areas of novelty of these technologies when compared to the current fleet of reactors has been developed The impact of these areas of novelty on the applicability and completeness of the IAEA safety standards is assessed in the publication Gaps and areas for additional consideration are identified The review undertaken to develop this report encompassed the safety standards related to the lifetime of these reactor technologies The publication also considers the interface between safety security and safeguards in the design of these technologies
