Prescribing Hemodialysis T.A. Depner, 2012-12-06 What regulation shall we have for the operation Shall a man transfuse he knows not what to correct he knows not what God knows how l Dr Henry Stubbs Royal College of Physicians circa 1670 If dialysis therapy were a new pharmaceutical product being evaluated by the FDA now it might not be approved for marketing The recommended dose its potential toxicity the side effects of under or over dialysis as well as its efficacy have been the subject of very few studies The high mortality rate associated with the treatment may raise a few eyebrows That it is a life saving modality of treatment is undoubtedly true for more than 100 000 patients in the United States and for more than a million patients world wide Because dialysis has extended the lives of many people by a variable period of time most nephrologists have rested on their laurels and did not vigorously pursue studies to optimize these treatments But facts have a way of intruding in all our lives and the facts are that the overall mortality rate of dialysis patients in the United States is rising and stands close to 25% per year and is closer to 33% per year for patients between the ages of 65 and 74 2 These mortality figures are considerably higher for age adjusted dialysis populations in Europe and particularly in Japan and certainly for the age adjusted nonnal population
