Processing of Poultry G. C. Mead,2012-12-06 Over the last 40 years poultry meat production has undergone considerable expansion in much of the developed world The industry has changed from an essentially farm based operation to one where economies of scale in rearing and processing have led to a high degree of operational efficiency As a sequel to these changes however there is now greater emphasis on product quality rather than mere production at least cost Also the more recent growth in further processed and value added convenience items has helped to maintain a buoyant market for poultry and has shown that the industry can rapidly adapt to changing consumer needs and preferences It is in the areas of primary processing and further processed product development that the greatest

technological changes have occurred within the industry Processing in particular has become more mechanical so that most stages in the production of oven ready carcasses or cut portions are now either semi or fully automated thus reducing labour costs and helping to maximise the speed and efficiency of the process However not all of the changes that have taken place have necessarily been in the best interests of maintaining product quality e g in relation to meat tenderness and microbial contamination and it is essential for any processor to understand fully the effects of processing on all aspects of meat quality including the efficacy of possible control measures
