Artificial Intelligence Techniques in Breast Cancer Diagnosis and Prognosis Ashlesha Jain, Ajita Jain, Sandhya Jain, 2000 The main aim of this book is to present a sample of recent research on the application of novel artificial intelligence paradigms to the diagnosis and prognosis of breast cancer These paradigms include neural networks fuzzy logic and evolutionary computing Artificial intelligence techniques offer advantages such as adaptation fault tolerance learning and human like behavior over conventional computing techniques The idea is to combine the pathological intelligent and statistical approaches to enable simple and accurate diagnosis and prognosis This book is the first of its kind on the topic of artificial intelligence in breast cancer It presents the applications of artificial intelligence in breast cancer diagnosis and prognosis and includes state of the art concepts in the field It contains contributions from Australia Germany Italy UK and the USA

Quantitative cyto- and histoprognosis in breast cancer Paulus J. van Diest, 1990 *Diagnosis of Non-Palpable Breast Lesions* J. Mouriquand, 1993-08-06 *Modern Methods in Analytical Morphology* J. Gu, G.W. Hacker, 2012-12-06 While advances in modern medicine largely parallel our understanding of morphology discoveries in morphology are propelled by developments of new tools and means to visualize and measure tissue elements The invention of dissecting light fluorescence and electron microscopes together with advances in labeling and staining techniques are among the stepping stones of morphological progress Today we are in an exciting new era when classical morphology is being combined with developments from other disciplines The combination of morphology and immunology resulted in immunocytochemistry morphology and molecular biology led to in situ hybridization and in situ PCR Adding computer science to morphology gave birth to image analysis Combining laser technology and the microscope evolved into confocal microscope For more than a decade modern morphology has continued to develop by merging with other disciplines at a rate that is still gathering momentum providing exciting and dynamic new frontiers for other biological fields *Modern Methods in Analytical Morphology* based largely on the First International Workshop on Modern Methods in Analytical Histochemistry is an updated review of the current trends in the field It covers an extensive array of new technical developments in major disciplines of modern morphology The authors are not only leaders in their fields but also have extensive hands on experience with bench work Their chapters are written in a comprehensive manner including discussion of both theoretical

become routine methods of the cytology of tomorrow **Pointers to Cancer Prognosis** B.A. Stoll,2012-12-06 The last 30 years have seen little improvement in the age adjusted mortality rates for most common types of cancer and until we develop more effective and less damaging treatment modalities for these tumours selection of each patient s treatment must depend on prognostic pointers These lead to a calculated trade off between our estimate of likely benefit to the patient as against cost in terms of quality of life But changes have occurred recently in our understanding of the traditional prognostic pointers used for selecting such individualised treatment First it is increasingly recognised that the stage at which a tumour presents is more related to the chromo logical age of the tumour how far it has progressed before diagnosis than to its biological characteristics While advanced chronological age of the tumour may predict a greater likelihood of early death only biological criteria can predict the tumour growth rate the likelihood of prolonged survival the likely course of the disease after the first recurrence or the likelihood of response to systemic therapy Second there is increasing use of failure analysis in relating the clinical and biological characteristics of tumours to their response to standard treatments In the past the relationship was interpreted mainly in terms of survival rate but the site and timing of first recurrence and the pattern and timing of subsequent spread provide a better assessment of the control possible from local or systemic therapy
