Quantum Fields — Algebras, Processes L. Streit, 2012-12-06 Are we living in a golden age It is now more than half a century that Einstein and Heisenberg have given us the theories of relativity and of quantum mechanics but the great challenge of 20th century science remains unre solved to assemble these building blocks into a fundamental theory of matter And yet for anyone watching the interplay of mathematics and theoretical physics to day developing symbiotically through the stimulus of a lively even essential interdisciplinary dialogue this is a time of fascination and great satisfaction It is also a time of gratitude to those who had the courage to insist that a rudimentary knowledge of the Latin and Greek alpha betas was not enough and tore down the barriers between the disciplines On the basis of this groundwork there is now so much progress and notably such strengthening of the dialogue with phenomenology that reaching out for The Great Break through this may indeed turn out to be the golden age *Quantum Fields* Ludwig Streit, 1980 *Quantum Fields — Algebras, Processes* Ludwig Streit, 1980-10-07 Causal analysis in terms of white noise Introduction to stochastic differential calculus A generalized stochastic calculus in homogenization Interaction picture for stochastic differential equations Path integrals stationary phase approximations and complex histories Stochastic dynamics and the semiclassical limit of quantum mechanics Asymptotic expansion of fresnel integrals relative to a non singular quadratic form Scaling limits of generalized random processes Renormalization group analysis of some highly bifurcated families Anticommutative integration and fermi fields Homogenous self dual cones and jordan algebras Generators of one parameter groups of automorphisms on UHF algebras Automorphisms of certain simple C algebras Non commutative group duality and the kubo martin schwinger condition A uniqueness theorem for central extensions of discrete products of cyclic groups Introduction to w categories Net cohomology and its application to field theory Construction of specifications On the global markov property Uniqueness and global markov property for euclidean fields and lattice systems Martingale convergence and the exponential interaction in R On dia and paramagnetic properties of yang mills potentials A new look at generalized non linear o models and yang mills theory 1 N expansions and the O N nonlinear o model in two dimensions On the Z2 lattice higgs system Fluctuation of the interface of the two dimensional ising model The stability problem in o4 scalar field theories Quantum Fields - Algebras, Processes L Streit, 1980-10-07 Ideas and Methods in Mathematical Analysis, Stochastics, and Applications: Volume 1 Sergio Albeverio, Helge Holden, Jens Erik Fenstad, Tom Lindstrøm, 1992-06-26 A collection of essays by many of the closest co workers of Raphael Høegh Krohn **Stochastic Processes and Their Applications** Kiyosi Ito, Takeyuki Hida, 2006-11-14

Probabilistic Methods In Mathematical Physics: Proceedings Of The International Workshop Francesco Guerra, Maria I Loffredo, Carlo Marchioro, 1992-07-17 The aim of the Workshop was to bring together scientists involved in approaching topical problems in mathematical physics by probabilistic methods Main topics included Kinetic Theory Random Systems and Stochastic Mechanics Nonequilibrium Statistical Mechanics and Quantum Theory The book will be an important source for researchers and graduate students in mathematical physics looking for an up to date survey of the subject

Selected Papers of Takeyuki Hida Takeyuki Hida, Luigi Accardi, 2001 The topics discussed in this book can be classified into three parts i Gaussian processes The most general and in fact final representation theory of Gaussian processes is included in this book This theory is still referred to often and its developments are discussed ii White noise analysis This book includes the notes of the series of lectures delivered in 1975 at Carleton University in Ottawa They describe the very original idea of introducing the notion of generalized Brownian functionals nowadays called generalized white noise functionals and sometimes Hida distribution iii Variational calculus for random fields This topic will certainly represent one of the driving research lines for probability theory in the next century as can be seen from several papers in this volume

Lectures on White Noise Functionals Takeyuki Hida, Si Si, 2008 White noise analysis is an advanced stochastic calculus that has developed extensively since three decades ago It has two main characteristics One is the notion of generalized white noise functionals the introduction of which is oriented by the line of advanced analysis and they have made much contribution to the fields in science enormously The other characteristic is that the white noise analysis has an aspect of infinite dimensional harmonic analysis arising from the infinite dimensional rotation group With the help of this rotation group the white noise analysis has explored new areas of mathematics and has extended the fields of applications
