Chemists have only recently started to appreciate the enormous potential water has to offer in the development of new synthetic reactions and strategies where it can offer benefits in both unique chemistry and reduced environmental impact. In this new book the editor well known for his contribution to the development of water as a useful medium in synthetic organic chemistry has assembled an international team of authors themselves at the forefront of research into the use of the unique properties of water carrying out organic transformations to provide a timely and concise overview of current research. By focusing on the practical use of water in synthetic organic chemistry and with the concern for the use of solvents in organic chemistry professional chemists particularly those involved in industrial research and development will find this book an essential guide to the current state of the art and a useful starting point in their own research. Academic chemists including postgraduate and advanced undergraduate students will find this book an invaluable guide to this exciting and important area of chemistry.

This book reviews the influence of mass and heat transport on the performance of heterogeneous catalysts. Organized into five parts encompassing 17 chapters this compilation of papers starts with an overview of how the formulation of the catalyst and the selection of operating conditions influence the chemistry of the reactions that occur. This text then examines the Auger electron spectroscopy AES which is a powerful tool for the analysis of surface and subsurface elemental composition in the fields of metallurgy semiconductors and thin films. Other chapters consider the importance of differential thermal analysis DTA as a useful method for rapidly screening potential catalysts. The final chapter deals with the rhodium catalyzed nuclear hydrogenation of N aryl amides which is an excellent laboratory method for the preparation of N alicyclic amides. This book is a valuable resource for organic and catalytic chemists.
