Two titles by Michael Reist discuss education: school is our children's second home. They will spend more time there than anywhere else in their formative years. We all need to talk honestly about the nature of this environment. What Every Parent Should Know About School is an honest, positive, thought-provoking look at what schools are today and what they could be in the future. Raising Boys in a New Kind of World is a passionate call for greater empathy. The more we know about boys, the more realistic our expectations of them will be. Combining the expertise of its author, a celebrated expert in parent-infant mental health and mother of two, with the latest findings in gene-by-environment interactions, epigenetics, behavioural science and attachment theory, Scientific Parenting describes how children's genes determine their sensitivity to good or bad parenting, how environmental cues can switch critical genes on or off, and how addictive tendencies and mental health problems can become hardwired into the human brain. Includes Raising Boys in a New Kind of World, Scientific Parenting: What Every Parent Should Know About School.

The book is divided into three subsections: General Issues in Human Memory, Memory and Aging, and Memory and the Brain. These sections represent the three cornerstones in Lars G. Nilsson's scientific career and comprise contributions from senior collaborators, colleagues and former students. Areas of discussion include long-term and working memory, how do they interact, an epidemiological approach to cognitive health in aging, the cognitive neuroscience of signed language. Covering a broad range of topics, Memory, Aging and the Brain will be of great interest to all those involved in the study and research of human memory.
