Mechanochemistry Roman Boulatov, 2015-10-17 The series Topics in Current Chemistry presents critical reviews of the present and future trends in modern chemical research The scope of coverage is all areas of chemical science including the interfaces with related disciplines such as biology medicine and materials science The goal of each thematic volume is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field Review articles for the individual volumes are invited by the volume editors Readership research chemists at universities or in industry graduate students Agricultural Cybernetics

Yanbo Huang, Qin Zhang, 2021-08-17 Agricultural systems are uniquely complex systems given that agricultural systems are parts of natural and ecological systems Those aspects bring in a substantial degree of uncertainty in system operation Also impact factors such as weather factors are critical in agricultural systems but these factors are uncontrollable in system management Modern agriculture has been evolving through precision agriculture beginning in the late 1980s and biotechnological innovations in the early 2000s Precision agriculture implements site specific crop production management by integrating agricultural mechanization and information technology in geographic information system GIS global navigation satellite system GNSS and remote sensing Now precision agriculture is set to evolve into smart agriculture with advanced systematization informatization intelligence and automation From precision agriculture to smart agriculture there is a substantial amount of specific control and communication problems that have been investigated and will continue to be studied In this book the core ideas and methods from control problems in agricultural production systems are extracted and a system view of agricultural production is formulated for the analysis and design of management strategies to control and optimize agricultural production systems while exploiting the intrinsic feedback information exchanging mechanisms On this basis the theoretical framework of agricultural cybernetics is established to predict and control the behavior of agricultural production systems through control theory **Dictionary Catalog of the Research Libraries of the New York Public Library, 1911-1971** New York Public Library.
