Kobe, Japan, 11-14 May 1982 K. Yasukochi, H. Nagano, 2013-10-08 Proceedings of the Ninth International Cryogenic Engineering Conference Kobe Japan 11-14 May 1982 contains the papers presented during the entirety of the conference. The overall focus is on the presentation of technical developments and new applications in the field of cryogenics. The topics covered during the conference include high speed magnetic levitation train, magnetic fusion energy and its cryogenic applications and cooling effects in a vortex cooler. Superconductivity and fusion digital applications of the Josephson effect, thermally activated Stirling cryocooler and large cryogenic systems of the energy doubler are discussed as well. Physicists, chemists, engineers and researchers in the field of cryogenics will find the compendium very insightful. **Cryogenic Particle Detection** Hans-Christian Stahl, 2005-06-22 The development of cryogenic devices for particle detection has reached a stage at which many interesting applications are conceivable and already have been demonstrated. The book provides a comprehensive review of the field of cryogenic particle detection. It introduces the different detection techniques and gives an overview of the important areas in which these detectors are successfully applied. **Nuclear Electronics** Vladimir Polushkin, 2004-11-19 With the commercialisation of superconducting particles and radiation detectors set to occur in the very near future, nuclear analytical instrumentation is taking a big step forward. These new detectors have a high degree of accuracy, stability and speed and are suitable for high density multiplex integration in nuclear research laboratories and astrophysics. Furthermore, superconducting detectors can also be successfully applied to food safety, airport security systems, medical examinations, doping tests, forensic investigations. This book is the first to address a new generation of analytical tools based on new superconductor detectors demonstrating outstanding performance unsurpassed by any other conventional devices. Presenting the latest research and development in nanometer technologies and biochemistry, this book discusses the development of nuclear sensing techniques. Provides guidance on the design and use of the next generation of detectors. Describes cryogenic detectors for nuclear measurements and spectrometry. Covers primary detectors, front end readout electronics and digital signal processing. Presents applications in nanotechnology and modern biochemistry including DNA sequencing, proteomics, microorganisms. Features examples of two applications in X-ray electron probe nanoanalysis and time of flight mass spectrometry. This comprehensive treatment is the ideal reference for researchers, industrial engineers and graduate students involved in the development of high precision nuclear measurements, nuclear analytical instrumentation and advanced superconductor primary sensors. This book will also appeal to physicists, electrical and electronic engineers in the nuclear industry. **Calorimetry In High Energy Physics: Proceedings Of The 8th International Conference** Gaspar Barreira, Agostinho Gomes, Amelia Maio, Bernardo Tome, Maria J Varanda, 2000-05-31 The International Conference on Calorimetry in High Energy Physics has become the major forum for presenting the latest developments of calorimetry techniques. The eighth conference was attended by about 130 physicists from 20 countries and covered all aspects of calorimetric particle detection and measurements with emphasis on high energy physics experiments.
