Low Angles:

Low-Angle Radar Land Clutter J. Barrie Billingsley, 2002-04-01 A necessary reference for all radar engineers or analysts including many levels of managers advisors and decision makers in the U S and worldwide radar industry Directly useful in both military DOD and civilian FAA applications The result of 20 years of research at MIT Lincoln Lab this book is of the most significant technological consequence for the industry It actually solves the problem of low angle radar land clutter by showing the reader how to design and predict the performance of radars that operate in situations where land clutter prevalent Radar land clutter constitutes the unwanted radar echoes returned from the earth s surface that compete against and interfere with the desired echoes returned by targets such as aircraft and other moving and stationary targets The ability to accurately predict the effects of land clutter in surface radar has been an unsolved problem for many years This book is comprehensive in addressing the topic containing many interrelated results each important in its own right It unifies and integrates all the results so as to create a comprehensive innovative and unequalled work The results of this book directly enable the reader to predict land clutter effects in surface radar Modern military aircraft deliberately fly low to hide their presence from radars that are also dealing with land clutter Depending on the terrain the performance of the radar varies greatly from very good to very poor This book helps radar engineers provide accurate assessments of ground clutter thus bringing their ability to detect and operate against low flying aircraft to a much higher and much more consistent level

Modern Aspects of Small-Angle Scattering H. Brumberger, 2013-11-11 Proceedings of the NATO Advanced Study Institute Como Italy May 12 22 1993 Biological Small Angle Scattering: Techniques, Strategies and Tips Barnali Chaudhuri, Inés G. Muñoz, Shuo Qian, Volker S. Urban, 2017-12-07 This book provides a clear comprehensible and up to date description of how Small Angle Scattering SAS can help structural biology researchers SAS is an efficient technique that offers structural information on how biological macromolecules behave in solution SAS provides distinct and complementary data for integrative structural biology approaches in combination with other widely used probes such as X ray crystallography Nuclear magnetic resonance Mass spectrometry and Cryo electron Microscopy The development of brilliant synchrotron small angle X ray scattering SAXS beam lines has increased the number of researchers interested in solution scattering SAS is especially useful for studying conformational changes in proteins highly flexible proteins and intrinsically disordered proteins Small angle neutron scattering SANS with neutron contrast variation is ideally suited for studying multi component assemblies as well as membrane proteins that are stabilized in surfactant micelles or vesicles SAS is also used for studying dynamic processes of protein fibrillation in amyloid diseases and pharmaceutical drug delivery The combination with size exclusion chromatography further increases the range of SAS applications The book is written by leading experts in solution SAS methodologies The principles and theoretical background of various SAS techniques are included along with practical aspects that range from sample preparation to data presentation for publication Topics covered include techniques for

improving data quality and analysis as well as different scientific applications of SAS With abundant illustrations and practical tips we hope the clear explanations of the principles and the reviews on the latest progresses will serve as a guide through all aspects of biological solution SAS The scope of this book is particularly relevant for structural biology researchers who are new to SAS Advanced users of the technique will find it helpful for exploring the diversity of solution SAS methods and applications Chapter 3 of this book is available open access under a CC BY 4 0 license at link springer com ,

Spreemann, 1957 This investigation was made to determine the effects of 6 degree full span and 3 degree partial span leading edge flaps in combination with chord extensions or fences on the aerodynamic characteristics of a wing fuselage configuration with a 45 degree sweptback wing of aspect ratio 4 taper ratio 0.3 and NACA 65A006 airfoil sections The investigation was made in the Langley high speed 7 by 10 foot tunnel over a Mach number range of 0.40 to 0.93 and an angle of attack range of about 2 degrees to 24 degrees Lift drag and pitching moment data were obtained for all configurations From overall considerations of stability and performance it appears that with the model of this investigation the 6 degree full span leading edge flaps in combination with the chord extension over the outboard 35 percent of the span with or without leading edge camber would be the most desirable configuration
