Inventing Africa Robin Derricourt, 2011-03-04 Inventing Africa is a critical account of narratives which have selectively interpreted and misinterpreted the continent's deep past. Writers have created alluring images of lost cities, vast prehistoric migrations and golden ages of past civilisations. Debates continue on the African origins of humankind, the contributions of ancient Egypt to the world and Africa's importance to global history. Images of Africa simplifying a complex and diverse continent have existed from ancient Mediterranean worlds, slave trading nations and colonial powers to today's political elites, ecotourists and aid givers. Robin Derricourt draws on his background as publisher and practitioner in archaeology and history to explore the limits and the dangers of simplifications, arguing as with Said's concept of Orientalism that ambitious ideas can delude or oppress as well as inform. Defending Africa against some of the grand narratives that have been imposed upon its peoples, Inventing Africa will spark new debates in the history of Africa and of archaeology.

The First Human Ann Gibbons, 2007-04-10 In this dynamic account, award-winning science writer Ann Gibbons chronicles an extraordinary quest to answer the most primal of questions: When and where was the dawn of humankind? Following four intensely competitive international teams of scientists in a heated race to find the missing link, the fossil of the earliest human ancestor, Gibbons ventures to Africa where she encounters a fascinating array of fossil hunters: Tim White, the irreverent Californian who discovered the partial skeleton of a primate that lived 4.4 million years ago in Ethiopia; French paleontologist Michel Brunet who uncovers a skull in Chad that could date the beginnings of humankind to seven million years ago; and two other groups, one led by zoologist Meave Leakey, the other by British geologist Martin Pickford and his French paleontologist partner Brigitte Senut, who enter the race with landmark discoveries of their own. Through scrupulous research and vivid first-person reporting, *The First Human* reveals the perils and the promises of fossil hunting on a grand competitive scale.

Unthinking Eurocentrism Ella Shohat, Robert Stam, 2013-09-27 This excellent book corrects eurocentric criticism from media studies in the past by examining Hollywood movie genres such as the western and the musical from a multicultural perspective.

The First Humans Frederick E. Grine, John G. Fleagle, Richard E. Leakey, 2009-05-24 There are some issues in human paleontology that seem to be timeless. Most deal with the origin and early evolution of our own genus, something about which we should care. Some of these issues pertain to taxonomy and systematics: How many species of *Homo* were there in the Pliocene and Pleistocene? How do we identify the earliest members of the genus *Homo*? If there is more than one Plio-Pleistocene species, how do they relate to one another and where and when did they evolve? Other issues relate to questions about body size, proportions and the functional adaptations of the locomotor skeleton. When did the human postcranial Bauplan evolve and for what reasons? What behaviors and what behavioral limitations can be inferred from the postcranial bones that have been attributed to *Homo habilis* and *Homo erectus*? Still other issues relate to growth, development and life history strategies and the biological and archeological evidence for diet and

behavior in early Homo It is often argued that dietary change played an important role in the origin and early evolution of our genus with stone tools opening up scavenging and hunting opportunities that would have added meat protein to the diet of Homo Still other issues relate to the environmental and climatic context in which this genus evolved The Truth about Human Origins Brad Harrub, Bert Thompson, 2003 Ever since Charles Darwin first published *The Origin of Species* on November 24 1859 the subject of origins has been one of the most controversial topics around Sadly it also is a subject that is fraught with erroneous theories and concepts Most students today are taught that organic evolution is not a theory but a fact that all reputable scientists accept Disclaimers from the evolutionary community notwithstanding such a claim is quite simply wrong We believe it is time for someone to offer what renowned news commentator Paul Harvey would call the rest of the story That is what *The Truth About Human Origins* does It tells the rest of the story as it discusses the scientific facts about mankind's beginning For example it investigates the record of the rocks as that record relates to human evolution It demonstrates how evolutionary theory is unable to explain things like the origin of gender and sexual reproduction the origin of language and communication the origin of the brain the mind and human consciousness and the origin of skin colors and blood types It also examines in an in depth fashion the so called molecular evidence of human evolution
