Managing Others Creatively:

Managing Creative People Gordon Torr, 2011-01-19 A clash between the ideology of growth and the growth of ideas between control and creativity between measurement and the immeasurable between predictability and the fickle muses of inspiration in engulfing our boardrooms In this scathing swipe at the institutionalised idiocy that is stifling creativity just at the time the world needs it most Gordon Torr draws from the leading lights of creativity research to demolish the myths that surround the generation of ideas in the modern organisation The curse of the brainstorm the commoditisation of creative talent the deskilling of the imagination the startling inadequacies of management theory these and the many other horrors of idea assassination that run rampant in creative sector companies are dissected and disembowelled in this hilarious expose of the drama that unfolds every time a new idea slides across the boardroom table This book sets out to address the black hole that surrounds the management of creative people debunking many myths of creativity and outlining a revolutionary approach to the pressing issue of creative productivity in the contemporary creative sector company A handbook of tools techniques methods and practical ideas whose USP is a framework for thinking about efficient creative management how to extract value from creative time Gordon Torr presents a logical argument that puts in place the building blocks of the author's knowledge and experience towards the final architecture We need them as never before And we know that they're somehow different Yet the productive management of creative people is an almost totally neglected science I doubt if there's a single industry that wouldn't gain immediate advantage from Gordon Torr's scrupulous and enlightening detective work

Jeremy Bullmore **Managing Others Creatively** Ted Pollock, Pollock, 1974-12 [Managing Creativity in Science and Hi-Tech](#)

Ronald Kay, 2012-12-06 The growing role of science and technology in modern society has generated a need for unique management skills on the part of scientists and engineers While this need is widely recognized there is little agreement on the most appropriate way in which it should be satisfied The general literature on management does not usually recognize the problems that are unique to those engaged in science and high technology This lack is also reflected in the considerable variety of formal management training which more often than not has missed its mark at least when judged by the response of participating scientists and engineers My recent experience teaching graduate students and practicing scientists and engineers about those aspects of management that are likely to be most relevant to their future endeavors has been the principle motivation for this book The book reflects some of what I have learned from that experience and has been further encouraged by the convictions that 1 the distribution of management potential among engineers and scientists is no different from that of other groups with comparable academic achievement 2 successfully managed scientific and technical enterprise provides the most useful source of learning and 3 the process of learning is facilitated by referring to the experience that has proven effective in creating an environment in which scientific and technical enterprise has flourished

Managing situated creativity in cultural industries Fiorenza Belussi, Silvia Sedita, 2013-10-31 Creativity is the emergence of something novel and appropriate from a person a group a society A creative idea or product must be novel Yet novelty is not enough a novel idea may be ridiculous or nonsensical In addition to novelty to be creative an idea or product must also attain some level of social recognition The individualist approaches to creativity overestimate the role of the individual and of his/her abilities the myth of the genius On the contrary the socio cultural approach emphasizes the role played by contexts in the creation process societies cultures and historical periods Accordingly the individual is seen as a member of many overlapping social groups each of them has its own network with a specific structure and organization which influences the creation of networks of potentially creative ideas Each individual is also a member of a culture which gives him/her the categories used to understand the world Finally each individual is representative of a specific historical period From a managerial perspective it is important to deepen the knowledge of the contexts both spatial and cognitive which favor situated creativity in the realm of the cultural industries This special book offers both theoretical and empirical contributions in an attempt to build such knowledge
