White, 2014-01-29. The financial deregulation of the last quarter century has meant large flows of funds around the world seeking the highest risk adjusted return for investors. Real estate is now established as an important asset class and advances in information technology provide the necessary tools to complement global developments in real estate finance and investment. A variety of investment vehicles have emerged and *Real Estate Finance in the New Economy* examines these along with financing and risk in the context of globalization, deregulation and an increasingly integrated international world economy by exploring questions like: How have real estate financial structures evolved as economies grow and become internationalised? What role do economic change and financial systems play in the development of real estate investment? Are the risks associated with the new economy really new? What is the future direction for real estate financing? The authors develop an economic framework for discussions on individual financial products to examine how real estate financial structures change with economic growth and internationalisation and also to show how developments in real estate finance impact economic growth. *Risk and the Rupee in Pakistan's New Economy* Antonia Settle, 2020-10-29. In a world of open markets and global

trade, development thinking seeks stability and prosperity for the world's poor by expanding access to financial products. This book challenges the development sector's embrace of financial inclusion by exploring how the new risks and instabilities that accompany the pivot towards the global economy undermine the functioning of money itself. Cast against fundamental change in the monetary environment accompanying the globalisation of markets, the book examines the rapid liberalisation of money and markets in Pakistan. It argues that liberalisation has generated substantive problems not only for the central bank as guardian of national currency but for ordinary households. By pinpointing how globalisation generates new risks for households in the everyday economy, the book reveals jarring contradictions between free markets and financial inclusion whilst challenging money theory by positing substantive and empirically grounded monetary contestation that demonstrates a burden of risk imposed on ordinary people that is only exacerbated by financial inclusion. *Managing Risk and Decision Making in Times of Economic Distress* Simon Grima, Ercan Özen, Inna Romănova, 2022-03-28. *Managing Risk and Decision Making in Times of Economic Distress* adds much needed scholarly analysis of the fledgling decision control approach, arguing the merits of its empirical content to shed light on the structure of capital contracts and rationale for diversity of
