Good, the Bad, the Right. An Interdisciplinary Perspective Giulio Arcangeli, Gabriele Giorgi, Nicola Mucci, Jean-Luc Bernaud, Annamaria Di Fabio, 2019-03-07 The labor market is evolving very rapidly in recent years in Europe and worldwide The fast and deep changes brought a brand new context of challenges and occupational risks to the attention of stakeholders The current global financial crisis has increased the economic pressures on companies and they in turn have intensified the

effects on employees particularly in terms of new competition contexts and a lot of stress and mental health issues. Concurrently, social, political, and environmental problems generate under employment, over qualification, over education, low wages for skilled workers, and unmet demand for education. Consequently, both high skilled and low skilled immigrant workers are increasing. In addition, workplaces are continually changing in step with the introduction of new technologies, materials, and work processes together with the changes in the labor market, the new forms of employment, and the new work organizations. These changes lead to new opportunities for employees and employers but also to new risks or re-actualization of old organizational risks. According to the EU OSHA, the key points that describe the evolution that is currently ongoing in the world of work are globalization, the technical innovation, and the aging population. On one hand, some older potential risks are reappearing in organizations: intensive fear and worries, organizational anxiety, boredom, physical violence, alienation, segregation, loneliness, and isolation. On the other hand, re-emerging perceived organizational features seem vital for organizations and more important today than ever. Central constructs in the study of organizational behavior and organizational health, such as perceived organizational support, commitment in organizational context, socialization processes, change capacity of organizations, perceived organizational justice, ergonomics, and motivation, nowadays seem increasingly important and renewed.

Management and Mitigation of Emerging Pollutants Nancy George, Vagish Dwibedi, Santosh Kumar Rath, Prakram Singh Chauhan, 2023-11-08. This book offers a comprehensive overview of the environmental challenges posed by emerging pollutants and the innovative strategies available for their management. Divided into 16 chapters, the book begins with an introduction to the origin and management of both inorganic and organic contaminants, offering a detailed examination of their sources and the potential risks they pose to ecosystems. It also explores current regulations and management practices aimed at mitigating their impact. In the following chapters, experts in the field cover topics such as conventional wastewater treatment methods for the removal of emerging pollutants, biotechnology-based strategies for the removal of emerging contaminants, microbial electro-deionization technologies, and algae-based bioremediation. Particular attention is given to specific remediation techniques, including phytomediated approaches, microbial fuel cells, and the novel application of

microbial endophytes Furthermore the book explores the potential of nano bioremediation and enzyme immobilization technologies shedding light on their mechanism of interaction with nanomaterials and microbes for efficient treatment Other chapters highlight the role of graphene based nanocomposites bio based porous materials and biosurfactants in the remediation of emerging pollutants showcasing their unique capabilities and potential applications In the final chapter of the book readers will discover more about the impacts of emerging pollutants on environmental microbial communities and the consequential public health concerns that arise from their presence Given its breadth this book is a valuable resource for environmental scientists policymakers and industry professionals seeking to mitigate the ecological risks associated with these contaminants
