Gornitzka, Francisco O. Ramirez, 2018-08-04 This book discusses how modern universities increasingly use reputation management in relation to internal and external challenges Universities are increasingly characterized by social embeddedness relating to many external stakeholders and international markets of students researchers and research projects This implies global pressure to standardize formalize and rationalize their internal organization The book uses data from China Norway and US to show how reputation symbols are used and balanced based on their web pages Further it uses extensive data from US universities to show how their internal organization structure is developing over time related to three types of units positions development diversity and legal offices and roles *Making Policy in British Higher Education 1945-2011* Michael Shattock, 2012-10-16 Every Mike Shattock book on higher education is worth keeping and re reading *Making Policy in British Higher Education 1945 2011* is a great story very readable and full of wry humour It is also a profoundly informative work that explains the policy and politics of higher education better than anything else that is available Professor Simon Marginson Centre for the Study of Higher Education University of Melbourne Australia As expected Michael Shattock s mastery of the history of higher education policy making in the UK is evident in every page the temptation is to say every paragraph This is a demanding analysis It is packed precise judicious and immensely informed As a narrative about how policy making occurs in the long run how to read the relevant archival and other documents closely and how to avoid the easy generalizations arising from ideological partis pris this study is an instant classic Sheldon Rothblatt Professor of History Emeritus University of California Berkeley USA In the last 30 years Britain has experimented with some of the most innovative higher education policies including academic quality assurance research assessment income contingent loan financing tuition policy information for students and other efforts to stimulate competitive market forces In this highly enlightening meticulously researched and fascinating history university administrator and scholar Michael Shattock examines the individuals and financial policy drivers that have shaped British higher education from World War II to the present day and explores the impacts of these policies on the university sector David D Dill Professor Emeritus of Public Policy University of North Carolina at Chapel Hill USA Michael Shattock s important new book could not be better timed He offers a detailed nuanced and above all intelligent account of policy making in British higher education over the past 60 years This book reminds us that novelty is more often in the eye of the beholder than the historical record It also warns us that those who have forgotten past events are often fated to relive them and that second or third time round is rarely an improvement Peter Scott Professor of Higher Education Studies Institute of Education University of London UK This book aims to provide an authoritative account of the evolution of policy in British higher education drawing extensively on previously untapped archival sources It offers a comprehensive analysis of the policy drivers since 1945 and up to 2011 and of the extent to which even in the so called golden age of university autonomy in the immediate post War period the development of British higher education policy was closely integrated with government policies In particular it highlights

how the role of the Treasury in determining the resource base for the expansion of student numbers is key to understanding many of the shifts in policy that occurred. This close engagement with government coupled with the historical acceptance of institutional autonomy defines the distinctiveness of the British higher education system as compared with other countries. What the book also shows however is that policy was rarely driven directly by Ministers but emerged out of interrelationships between the Treasury, the responsible Department, the intermediary bodies, the higher education representative bodies and the research communities. The policy process was interactive rather than directed. The conclusions offer a new interpretation of the development of British higher education.

Financing Public Universities Marcel Herbst, 2007-05-16

Financing Public Universities addresses newer practices of resource allocation which tie funding to indicators of performance. The gist of these efforts is to raise the quality of institutional systems. Performance based budgeting and funding of public universities is part of broader efforts to reform public management and it is being promoted and implemented by various government agencies around the globe. In particular European universities with their normally strong governmental ties or higher education systems molded on European universities are prime targets of such reforms. Performance funding has made its inroads in attempts to grant university systems managerial autonomy. Autonomy was to be granted in exchange for funding modes which are tied to the measurement of performance indicators. Unfortunately performance based budgeting or funding measures cannot meet the various expectations; they do not raise the quality of teaching or learning, they do not raise research performance, they take back a great deal of managerial autonomy which is commonly judged to be essential for the well being of higher education institutions, in particular research universities, and they act as automata in place of proper governance and management. *Financing Public Universities* addresses policy makers, higher education administrators, scholars and students of higher education management. After an introduction to the theme and to the book, Chapter 1 *Financing Public Universities* covers the evolution of mass higher education and the associated curtailment of funding. Chapter 2 the public management reform debate. Chapter 3 within which performance based budgeting or funding evolved. Chapter 4 sketches alternative governance and management modes which can be used instead. Chapter 5 and epitomizes inertia or challenges. Chapter 6. Four appendices cover more technical matters such as a comparative exposition of the research performance of universities by nation. Appendix C and examples of funding systems in the UK and in the USA. Appendix D.

European Universities in Transition Carmelo Mazza, Paolo Quattrone, Angelo Riccaboni, 2008-01-01

This attractively presented edited collection is a welcome analysis of issues facing universities. It consists of 14 chapters by experts who work in university management and economics departments; this is an excellent collection. Its value stems from the fact that it enables comparisons to be made and to see that globally the traditional university system is being seriously challenged. The authors in this collection provide a range of perspectives on how the universities in their various locations can begin to respond to these challenges.

Anthony Potts *Journal of Educational Administration and History* The future of the

university this old European institution is of utmost interest not only to university students and teachers but to whole societies not only in Europe but in the whole world as the institution has become global Nobody can predict it but the editors of this volume were able to ask incisive questions and collected thoughtful and provocative answers which can contribute to the debate on the fate of universities in a significant way Barbara Czarniawska University of Gothenburg Sweden While acknowledging the value of better university management this book resists the idea that an externally imposed standardization and a more homogenous European system of higher education adds up to a desiderata On the contrary the book editors argue that the persistence of the university and its survival in the future is aided by differences between universities European Universities in Transition is must reading for students of higher education reform Francisco O Ramirez Stanford University US This timely and important book provides a critical analysis of the changes and challenges that currently affect European universities Using both theoretical contributions and applied case studies leading experts argue that universities as institutions are in need of change although the routes that the process may take are heterogeneous The authors debate whether the reform of universities suffers from the undue influence of generalisations that do not stand up to scrutiny It is simply too narrow to focus on strategies such as imitating a university model hoping that best practices will solve the inefficiencies of the organisation as a whole or relying on the presence of few external individuals on the universities board to save the difficult relationships between the university and the surrounding economy and society These ideas ignore the diversity of universities geographically and historically Above all they underestimate the power that such diversity holds in making universities survive across centuries Researchers with an interest in university reform will appreciate this important contribution to the debate whilst policymakers and university administrators will find this book invaluable in understanding the changes and problems facing European universities and gaining insights on possible solutions

University Rankings, Diversity, and

the New Landscape of Higher Education ,2019-02-18 University rankings are a relatively new phenomenon in higher education Although quite an established practice in the U S it is only within the last decade that attempts to analyse university performance have spread to the rest of the world and that we also have seen new global rankings appear rankings attempting to measure university performance beyond national borders No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world This book is written as part of the effort to better understand rankings and their effects on higher education A serious approach towards university rankings implies that rankings should be analysed properly including the methods used and the indicators chosen and investigate the objectives claimed If university rankings are considered as consumer information then everyone should have an interest in basing such guidance on valid and reliable data and methodology A serious analysis should also discuss the wider implications of rankings as an emerging phenomenon in higher education Consequently the contributions to this book investigate and analyse how different rankings work how they reach their conclusions and on what data and methodology they are built Furthermore it provides a critical reflection about the impact of rankings on higher education how and in what way rankings influence policy making the structure of the sector or the internal life of the sector

International Trends in University Governance Michael Shattock,2014-06-05 Governance is becoming increasingly important in universities just as it is in the wider world of commerce and banking Historically universities were run by their academic communities but as mass higher education has taken root as university research has become a critical element in national economies and as the demand for more accountability both financial and in academic performance has grown pressure has mounted for a modernisation of governance structures One aspect of modernisation particularly important in many European systems and in Japan has been the decision by governments to give institutions greater autonomy more control over their budgets and legal responsibility for the employment of their staff International trends to introduce greater competition between institutions to encourage greater institutional differentiation and give greater play to market forces has led to an emphasis on leadership a more systematic involvement of external stakeholders and a more corporate style of governance At the same time this has often led to a sense of loss of collegiality a redistribution of authority and a growing gap between the centre and the periphery within universities This book analyses governance change in nine major higher education systems Australia Finland France Germany Italy Japan Norway the UK and the USA each account being the result of independent research by a leading authority in the field and describes how a convergence of governance structures has been mediated by the historical cultural political and social characteristics of the different systems Michael Shattock is a leading authority on university governance this study offers the most up to date account of governance reform in a range of higher education systems an analysis of the common trends and an assessment of their impact on the idea of a university It will be essential reading for academics postgraduates and practitioners in higher education
