## **Managing For Performance Perfection The Changing Emphasis 001:**

**Macroergonomics** Hal W. Hendrick, Brian Kleiner, 2002-04-01 This book's primary objective is to provide a comprehensive coverage of ergonomics in overall work system analysis and design. It provides a summary of the historical development of macroergonomics. It explains how an understanding of macroergonomics can lead to improvements in such things as reducing work-related lost time accidents and describes the methods and tools used in work system analysis and design. Throughout the integrating theme is that the full potential of an organization in terms of productivity, safety, health, and Quality of Work Life (QWL) can't be met unless the overall work system is designed to conform with the characteristics of its technology, personnel subsystem, and the external environment upon which it depends for its survival and success. Using a sociotechnical systems approach, this text discusses the application of macroergonomics to training system development, hazard management, technology transfer, large scale organizational change projects, office and factory automation, community planning and development, and job design. For each of these applications, actual case examples will be included. The book will appeal to teachers of introductory human factors/ergonomics courses as a supplemental text or as the primary text for a course fully devoted to macroergonomics. In addition, it should also appeal to practicing ergonomists internationally as a must-add to their personal professional libraries.

**Variability in Human Performance** Thomas J. Smith, Robert A. Henning, Michael G. Wade, Thomas Fisher, 2014-08-26 Understanding the conditions under which variability in performance may arise and the processes related to its emergence gives us insight into the development of techniques for improving the quality of performance. *Variability in Human Performance* details the scientific and the practical implications of human performance variability by providing a broad perspective on how and why such variability occurs across a number of disciplinary domains. The text takes an approach that rests upon the idea of context or design specificity in performance, namely that variability in performance is closely referenced to design factors in the environment in which performance is occurring. An exploration of the link between variability and related processes, the book introduces a comprehensive framework for understanding human performance variability presented in terms of how human control of behavior is closely tied to design factors in the performance environment. The authors introduce empirical evidence as well as practical examples and application areas in support of this framework. The book begins with coverage of neurobiological and biomechanical basis of movement variability, then examines rich and extensive empirical evidence available for context specificity in cognitive performance and learning as a basis for cognitive performance variability. The book then reviews the evidence for context specificity in student learning, displaced feedback conditions, human error behavior, affective performance, social and team performance. The authors also explore work performance as influenced by complex sociotechnical systems and as a basis for performance variability, applying control systems concepts to an interpretation of the nature and basis of performance variability in all of these domains. They conclude by taking an evolutionary perspective.

on the origins and behavioral significance of human performance variability The book then provides strategies on how individuals groups and organizations can significantly reduce variability in human performance that often leads to systems failures
