From the construction of Notre Dame and the Eiffel Tower to the Fall of the Bastille and the Declaration of the Rights of Man and the Citizen to Napoleon's defeat at Waterloo to Albert Camus, L. Etranger and the existentialism of Jean Paul Sartre France has been a part of some of the greatest and most memorable events in human history. Author Gino Raymond relates the history of these events in the second edition of the Historical Dictionary of France. Through a chronology, an introductory essay, a bibliography and hundreds of cross-referenced dictionary entries on kings, politicians, authors, architects, composers, artists and philosophers, a thorough history of France is presented.

Canadian Defence

Industry in the New Global Environment Alistair D. Edgar, 1995-05-01

Alistair Edgar and David Haglund

examine changes in the international demand for defence products in the post Cold War era, review the reorganization and rationalization of the supply side of the international defence market through various government policy initiatives and corporate strategies, and discuss the ways in which the Canadian government and defence producers have attempted to cope with this new and uncertain international environment. They also explore the international and domestic contexts, military, economic and political, within which defence industries operate. Edgar and Haglund's analysis draws on extensive interviews with political and industry leaders, military personnel and government officials from Canada, the United States, the United Kingdom, France, Belgium, the Netherlands, Norway, Denmark, Spain and Germany. This timely study of the domestic, American and other NATO defence markets will interest scholars and students of Canadian defence policy, Canadian foreign policy and Canadian external relations and public servants, politicians and personnel in the industry.

Continuity and Change in France Vincent Wright, 2024-09-02

First published in 1984, *Continuity and Change in France* sets out to explore questions by examining the many features of the Giscard presidency which have endured under Socialist rule. Few people predicted the election victory of François Mitterrand over Giscard d'Estaing in May 1981. It was greeted by his supporters at least as the first remarkable event in a chain of far-reaching changes which would transform France. However, it has gradually become clear that political change does not come easily to modern France and that continuity is at least as important. This book is at once a valuable review of the 1974-81 period as well as a revealing account of what has changed since then and what, despite the rhetoric, has not. The contributors cover a number of areas important to

French presidency and demonstrate the existence of a surprising degree of continuity in terms of both policy and personnel. They will be welcomed by all students of French politics as providing the basis for a fuller assessment of the successes and shortcomings of the Mitterrand years. **Routledge Revivals: Industrial Dislocation (1991)** Daniel Todd, 2018-05-08

First published in 1991, this book offers a thorough examination of the decline of heavy industry in industrialised countries in the West, which focuses on problems in the shipbuilding industry. Todd argues that three points are central to its demise: industrial life cycles, the international division of labour, and the energy crises of 1973. His work begins with despondency in western shipbuilding going back as early as 1956 when Japan usurped Britain as the pre-eminent ship producer. The book goes on to explore international trade and industry in the second half of the 20th century, with analysis on industrial reorganisation and East Asian conglomerates, diversification with the marine industries, and shipbuilding in Brazil, India, and China. **The Medical Management of Prostate Cancer II** Louis Denis, 2012-12-06

How to treat advanced prostatic cancer remains controversial despite intense basic and clinical research investigating the pathogenesis and natural history of this unique cancer, highly prevalent in elderly males. Nine experts were asked to meet and discuss the facts. This resulting monograph gives an overview of the available knowledge on all aspects of the subject. The objective evaluation and consensus opinion of the authors presented here set this book apart from other publications with conflicting viewpoints. For readers eager to obtain a comprehensive and balanced view of the thousands of clinical contributions and clear advice on the choices, this book is a must. **The Social Dynamics of Carbon Capture and Storage** Nils Markusson, Simon Shackley, Benjamin Evar, 2012-05-04

Carbon capture and storage (CCS) has emerged rapidly as a crucial technological option for decarbonising electricity supply and mitigating climate change. Great hopes are being pinned on this new technology, but it is also facing growing scepticism and criticism. This book is the first to bring together the full range of social and policy issues surrounding CCS, shedding new light on this potentially vital technology and its future. The book covers many crucial topics, including the roles and positions that different publics, NGOs, industry, political parties, and media are taking up the way CCS is organised, supported, and regulated; how CCS is being debated and judged; how innovation, demonstration, and learning are occurring and being conceptualised and promoted; and the role of CCS in the transition to a low-carbon energy future. The authors draw on a variety of approaches, concepts, methods, and themes, and provide a new understanding of innovation in the energy and climate change fields. It tackles the many issues in a way that speaks to those concerned not only to understand these developments but to those who are involved in the scientific and technological work itself, as well as those charged with evaluating and making decisions relevant to the future of the technology. *Management and Organizational Studies on*

Science in Victorian Manchester William T. Golden,2017-07-05 The evolution of an urban scientific community under the pressures of conceptual and social change is the main focus of this book Manchester was Victorian Britain s leading industrial city In order to describe and analyze the transformation of science in the eighteenth century Robert Kargon closely examines Manchester through successive stages In so doing he traces the evolution of science from an activity pursued by gentlemen amateurs to a highly specialized profession At the end of this process the author shows a major transformation in our understanding of the nature of science can be discerned scientific knowledge it was realized could be produced Science was no longer regarded primarily as the divine design rendered into laws of nature but rather as a method or instrument to be applied to novel areas of human endeavor Science had become on the one hand enterprise and on the other expertise In each chapter Kargon relates the changing conception of science and its social role to the birth growth and character of the city s scientific institutions The contours of the scientific community its interests concerns and approaches to what it came to see as critical problem were shaped by its civic environment Its character in turn responded to the development of the disciplines represented within it As the sciences increased in specialization and complexity during the course of the

nineteenth century they placed new stress upon the community affecting the composition of its membership and the nature of its leading institutions The scientific frontier reacted upon Manchester just as Manchester acted upon it Now available in paperback this classic work in history includes a new introduction by the author Bibliographic Guide to Business and Economics New York Public Library.
